

GroAurum

Admin Customer Management v1

Wholesale retailer network management console
Generated: July 16, 2026
apps/admin-web · UI shell only · Phase 3 adapters (af9e616)

This is NOT a simple customer list. Operators manage activation, health, sales coverage, and retailer history - not a generic CRM.

1. Purpose

Provide administrators with a complete retail network management console inside the GroAurum Admin shell. Sidebar navigation is unchanged; Customers replaces the placeholder module.

2. Design Principles

- Professional SaaS, desktop-first, high information density
- GroAurum Design System - white cards, green branding, 8px spacing
- Wholesale retailer network console - not a generic CRM
- Typed fixtures only - no backend mutations in v1
- Reusable admin components (Card, Badge, Button, Tabs, KPI cards)

3. Customer Dashboard KPIs

Route: /customers

- Active Retailers
- Awaiting Activation
- Inactive
- Blocked
- Today's New Customers

4. Customer Table

Column	Meaning
Shop Name	Trade name - links to detail
Owner	Shop owner contact name
Area	Service / delivery area
Assigned Salesman	Field coverage owner
Last Order	Latest order code / relative time
Preferred Payment	COD / Online / Credit
Status	Active / Awaiting / Inactive / Blocked

5. Customer Detail

Route: /customers/:customerId

- Overview - owner, phone, area, salesman, payment preference, status
- Orders - recent wholesale orders for the shop
- Payments - collections and settlement status
- Addresses - delivery addresses and serviceability
- Activity - network / activation event history
- Documents - GST, license, credit docs

6. Activation Workflow

- Created - shop record added to the network
- Invitation Sent - activation invite delivered
- OTP Verified - owner phone verified
- Activated - retailer live for catalogue and ordering

7. Customer Health

- Orders This Month
- Average Order Value
- Last Order Date
- Last Payment Status

8. Quick Actions

- Add Customer
- Send Invitation
- Reassign Salesman
- View Orders

Actions are UI stubs in v1 - they focus related tabs. Mutations deferred.

9. Data Preparation

```
apps/admin-web/src/data/customers-types.ts
apps/admin-web/src/data/customers-fixtures.ts
# CUSTOMERS_SNAPSHOT_FIXTURE + CUSTOMER_DETAIL_FIXTURES
# buildActivationWorkflow() for invitation readiness rail
# Replace with Supabase shop / invite / order queries
```

10. Files

- pages/customers/CustomersListPage.tsx - KPIs, actions, retailer table
- pages/customers/CustomerDetailPage.tsx - tabs + health + activation
- components/customers/* - badges, table, health, activation, tab panels
- App.tsx - /customers and /customers/:customerId routes

11. Validation

Check	Result
pnpm --filter @groaurum/admin-web typecheck	Pass
pnpm --filter @groaurum/admin-web build	Pass
Sidebar / Orders / Products / Pricing / Inventory	Unchanged
Backend mutations	Not implemented (by design)

12. How to Review

```
pnpm dev:admin
# Open http://localhost:5173/customers
# Sharma Kirana - active + full health
# Laxmi Stores - awaiting activation (invite sent)
# Quick Mart - blocked credit hold
```

13. Out of Scope

- Supabase invite / OTP / activate / reassign mutations
- Document upload and verification workflows
- Generic CRM pipelines or marketing campaigns
- Live map of retailer locations

14. Intent

Customer Management should feel like a wholesale retailer network console: see who is active or stuck in activation, inspect shop health, and keep sales coverage clear - not a consumer CRM address book.
