

GroAurum

Admin Dashboard v1

Operational dashboard for today's wholesale operations
Generated: July 16, 2026
apps/admin-web · UI shell only · Phase 3 adapters (af9e616)

Professional SaaS console - calm, premium, green GroAurum branding. No flashy charts, gradients, or marketing widgets. Business logic deferred.

1. Purpose

Provide a single operational dashboard that lets the business owner understand today's operations within about 30 seconds. Desktop-first admin web app with reusable components prepared for live backend wiring.

2. Design Principles

- Professional SaaS - clean, calm, premium
- Green GroAurum branding, white cards, 8px spacing
- High information density without clutter
- No flashy charts, gradients, or marketing widgets
- No consumer-style UI
- No business logic in v1 - UI shell and typed view models only

3. Layout

- Top navigation - logo, notifications/alerts, profile
- Sidebar - Dashboard, Orders, Customers, Products, Categories, Pricing, Inventory, Salesmen, Delivery, Service Areas, Reports, Settings
- Main content - Dashboard widgets (other nav items are placeholders)

4. Dashboard Widgets

Widget	Role
KPI Cards	Today's Revenue, Orders, Customers, Delivery, Collections
Daily Focus	Actionable operational items with priority badges
Low Stock	SKU availability vs threshold table
Sales Team Performance	Orders / revenue / collections / status table
Quick Actions	Add Product, Update Price, Add Customer, Create Route
Recent Orders	Order feed table (empty until live data)

5. Reusable Components

- Card, Button, Badge, PageHeader, EmptyState
- Shared DataTable styles for dense admin tables
- AdminShell, TopNav, Sidebar layout primitives
- Dashboard widgets accept typed props for future API snapshots

6. Data Preparation

Widgets consume DashboardSnapshot view models. A static fixture (DASHBOARD_FIXTURE) fills layout review only - KPIs show placeholders, recent orders stay empty until a live feed is connected. Swap the fixture for a backend query without redesigning the UI.

```
apps/admin-web/src/data/dashboard-types.ts  
apps/admin-web/src/data/dashboard-fixtures.ts  
# Replace fixture with live snapshot when ready
```

7. Stack

- Vite + React 19 + TypeScript
- React Router for shell navigation
- CSS design tokens aligned to GroAurum (no gradients)
- Source Sans 3 for calm professional typography

8. Files

- apps/admin-web/src/pages/DashboardPage.tsx - dashboard composition
- apps/admin-web/src/layout/* - TopNav, Sidebar, AdminShell
- apps/admin-web/src/components/dashboard/* - KPI and operational cards
- apps/admin-web/src/components/ui/* - reusable admin primitives
- apps/admin-web/src/App.tsx - routes (placeholders for non-dashboard modules)
- package.json root script: npm dev:admin

9. Validation

Check	Result
pnpm --filter @groaurum/admin-web typecheck	Pass
pnpm --filter @groaurum/admin-web build	Pass
Business logic / live APIs	Not implemented (by design)

10. How to Review

```
pnpm dev:admin
# Open http://localhost:5173
# Dashboard home + sidebar placeholder modules
```

11. Out of Scope

- Live revenue / order / inventory queries
- Auth, roles, and notification backends
- CRUD workflows behind Quick Actions
- Charts, maps, or marketing analytics
- Full Orders / Customers / Products module UIs

12. Intent

Admin Dashboard v1 should feel like a calm wholesale operations console: owner sees today's focus, stock risk, sales activity, and recent orders in one scan - not a consumer analytics billboard.
