

GroAurum Admin ERP

Application Progress Summary

What we built through Sprint 3.4 (Orders Workflow & Invoice System)

Generated: 2026-07-25
Audience: Product / Ops / Engineering
Stack: Vite Admin Web + Supabase (live data) + React Query

1. What GroAurum Admin Is

GroAurum Admin is the wholesale operations console for dry-fruit / kirana B2B. Owners and ops staff manage catalogue, customers, orders, delivery, salesmen, inventory, pricing, reports, and settings. Recent sprints focused on turning Orders into a full operational workflow with invoices and Convert-to-Sale.

- App path: apps/admin-web (Vite + React + React Query)
- Live data: Supabase Postgres + RLS (no mock business metrics in live mode)
- Auth: Admin module guards (orders, customers, products, delivery, ...)
- Dev: pnpm dev:admin -> http://localhost:5173/

2. Admin Modules Built (Map)

Module	What it does	Status
Dashboard	Control center KPIs, attention, activity	Live (Sprint 2.x)
Orders	Workflow, invoice, delivery assign, sale	Live (Sprint 3.1-3.4)
Sales	Converted sale invoices register	Live (linked to Orders)
Customers	Shops, activation, addresses, activity	Live foundation
Products / Categories	Catalogue, SKUs, publish checklist	Live foundation
Pricing	SKU prices, schedule, history	Live foundation
Inventory	Balances, movements, reservations	Live foundation
Salesmen	Team, visits, collections views	Live foundation
Delivery	Routes, stops, performance	Live foundation
Reports / Settings	Analytics placeholders + company config	Live foundation

3. Recent Sprint Focus (What Changed Most)

The last stretch of work upgraded the Dashboard and completed the Orders operational lifecycle: packing, delivery assignment, invoice printing, payment, and Convert to Sale - all on live Supabase data.

Sprint 2.1 / 2.2 - Dashboard

- Quick Actions, Operations at a Glance, Attention Required, Recent Activity
- Six executive KPIs: Monthly Revenue, Pending Orders, Salesmen Present, Delivery Men Working, Active Routes Today, Today's Sales Not Yet Received
- Orders deep-links via presets (?preset=..., ?payment=...)

Sprint 3.1 - Orders Module Redesign

- Orders list: summary cards, table, search/filter/sort/pagination
- Order detail: overview, items, timeline, payment, delivery, invoice, activity
- LiveAdminApi ordersSnapshot / orderDetail / assignOrderDelivery

Sprint 3.2 / 3.3 - Workflow & Invoice

- In Transit Progress card (e.g. 5 / 17 Delivered)
- Compact header search (order no / customer / mobile)
- Multi-size invoice: A4, A5, A6, Thermal + Print Preview + PDF filename
- Convert to Sale action; Sales section /sales for converted invoices
- GST removed from order totals and invoice layouts

Sprint 3.4 - Final Workflow + Trusted RPCs

- Full lifecycle timeline: Create -> Confirm -> Print Invoice -> Packed -> Assign Delivery Boy -> Out For Delivery -> Delivered -> Payment Received -> Convert To Sale
- sales / sale_items / sales_payments tables + orders.sale_id
- Trusted server RPCs (no direct client status updates): admin_advance_order_to, admin_assign_order_delivery, admin_mark_payment_received

4. Order Lifecycle (Current Business Process)

```

Create Order
  |
Confirm Order
  |
Print Invoice
  |
Packed   (Ready for Dispatch)
  |
Assign Delivery Boy
  |
Out For Delivery
  |
Delivered   (DB requires payment PAID first)
  |
Payment Received
  |
Convert To Sale (Completed)

```

Important invariant: Postgres enforces DELIVERED only when payment is PAID. Ops should use Payment Received before Confirm Delivery when needed. Convert to Sale requires Delivered + Paid and creates a sale invoice record without duplicating customer/product master data (line snapshots in sale_items).

5. Invoice System

- Print sizes: A4 / A5 / A6 / Thermal (compact rows so A5/A6 fit ~10+ lines)
- Print Preview dialog -> choose size -> Browser Print or Download PDF
- Header (~10%): company left; buyer / salesman / seller / order / invoice right
- Footer (~10%): authorized + customer signatures, terms, thank-you
- Totals: Subtotal, Discount (if any), Grand Total - no GST rows

- Final Print/PDF unlock after Convert to Sale; Preview available earlier

6. Security & Data Model Notes

Order status and payment trusted fields cannot be updated directly from the browser. A database trigger requires `groaurum.trusted_server_action=true`, which only SECURITY DEFINER RPCs set.

- `admin_advance_order_to` - walks happy-path statuses, writes `order_events` + audit
- `admin_assign_order_delivery` - creates/updates route stop + `ASSIGNED_TO_ROUTE`
- `admin_mark_payment_received` - marks payment PAID (trusted)
- Existing: `update_order_status_admin`, `delivery_*` RPCs for Delivery PWA

Sales conversion schema (migrations Sprint 3.3 / 3.4):

- `sales` - one row per converted order (`invoice_number`, `totals`, `converted_at`)
- `sale_items` - immutable line snapshots from `order_lines`
- `sales_payments` - payment link/snapshot for the sale
- `orders.sale_id` <-> `sales.order_id` bidirectional reference
- RLS: admin-only policies on sales tables

7. Key UI Surfaces to Click Through

Screen	What to look for
/ (Dashboard)	6 KPIs, attention, activity, quick actions
/orders	Summary cards, compact search, filters, table
/orders/:id	Workflow actions, timeline, delivery assign, invoice
/sales	Converted invoices only; preview/print/PDF links
Invoice tab	Size radios, Print Preview, PDF filename dialog

8. How to Run Locally

```
pnpm db:start
pnpm db:reset      # applies all migrations including sales + admin RPCs
pnpm dev:admin     # Admin UI on :5173
```

If Convert to Sale or workflow actions fail with missing table / `trusted_server_action` errors, the local Supabase DB is behind - run `db:reset` (Docker Desktop must be running).

9. Acceptance Snapshot (Orders Track)

- [x] In Transit Progress card shows delivered/total and opens in-transit preset
- [x] Compact search by order / customer / mobile; no large Browse Orders block
- [x] Automatic timeline stages with date, time, user, action
- [x] Delivery assignment + OFD + Delivered via trusted RPCs
- [x] Invoice A4/A5/A6/Thermal + Print Preview + editable PDF name
- [x] No GST on invoice / order totals
- [x] Convert to Sale creates `sales` + `sale_items` + `sales_payments` and links order
- [x] Live Supabase data only in live adapter mode

10. What This Means Going Forward

Orders is now the operational backbone: from warehouse packing through delivery assignment, payment, invoice print, and sale completion. The Sales register is a thin converted-invoice view today; a fuller Sales module can build on the `sales` / `sale_items` tables without rewriting order line logic.

- Keep all status changes on trusted RPCs - never reopen direct client updates
- Apply migrations before demoing Convert to Sale on a fresh DB
- Align ops training with: Pack -> Assign -> OFD -> Payment -> Deliver -> Sale
