

GroAurum

Admin Orders Management v1

Wholesale order operations control center

Generated: July 16, 2026

apps/admin-web · UI shell only · Phase 3 adapters (af9e616)

This is NOT a simple order list. Operators run fulfilment, payment, delivery, and audit from one console - not a CRUD page.

1. Purpose

Provide administrators with a complete wholesale order operations console inside the GroAurum Admin shell. Sidebar navigation is unchanged; Orders replaces the placeholder module.

2. Design Principles

- Professional SaaS, desktop-first, high information density
- GroAurum Design System - white cards, green branding, 8px spacing
- Operations control center feel - not a CRUD page
- Timeline reuses customer wholesale lifecycle states
- Activity log is append-only audit history
- Typed fixtures only - no backend mutations in v1

3. Orders Dashboard KPIs

Route: /orders

- Today's Orders
- Pending Confirmation
- Packing
- Ready for Dispatch
- Out for Delivery
- Delivered

4. Orders Table

Column	Meaning
Order ID	GA code - links to detail
Customer	Retail shop / account
Order Value	Commercial total label
Payment Status	Paid / Unpaid / Pending / Partial
Fulfillment Status	Wholesale lifecycle stage
Delivery Status	Not started / Assigned / OFD / Delivered
Salesman	Assigned field executive
Updated	Last ops update timestamp

5. Filters

- Date
- Status (fulfillment)
- Payment
- Salesman
- Warehouse

6. Order Detail

Route: /orders/:orderId

- Overview - customer, salesman, warehouse, statuses, notes
- Items - commercial SKU lines with qty and totals
- Timeline - customer wholesale lifecycle (Confirmed to Delivered)
- Payment - method, status, collected, outstanding
- Delivery - address, window, route, challan, delivery status
- Activity Log - append-only operational audit events

7. Timeline States

- Order Confirmed
- Stock Reserved
- Packing
- Ready for Dispatch
- Assigned to Route
- Out for Delivery
- Delivered

8. Quick Actions

- Assign Route
- Mark Packing
- Print Invoice
- Generate Challan
- View Timeline

Actions are UI stubs in v1 - they focus related tabs. Mutations deferred.

9. Data Preparation

```
apps/admin-web/src/data/orders-types.ts
apps/admin-web/src/data/orders-fixtures.ts
# ORDERS_SNAPSHOT_FIXTURE + ORDER_DETAIL_FIXTURES
# buildOrderTimeline() mirrors customer Order Timeline v1
# Replace with Supabase order / event queries
```

10. Files

- pages/orders/OrdersListPage.tsx - KPIs, filters, table, quick actions
- pages/orders/OrderDetailPage.tsx - six-tab operations detail
- components/orders/* - badges, filters, table, timeline, payment, delivery, activity
- App.tsx - /orders and /orders/:orderId routes

11. Validation

Check	Result
pnpm --filter @groaurum/admin-web typecheck	Pass
pnpm --filter @groaurum/admin-web build	Pass
Sidebar / Products / Pricing / Inventory	Unchanged
Backend mutations	Not implemented (by design)

12. How to Review

```
pnpm dev:admin
# Open http://localhost:5173/orders
# GA-14K2 - Packing + COD unpaid
# GA-15B2 - Out for Delivery
# GA-13P1 - Delivered with full timeline
```

13. Out of Scope

- Supabase assign route / packing / invoice / challan mutations
- Live payment gateway settlement
- Driver / map tracking UI
- Bulk order tools

14. Intent

Orders Management should feel like a wholesale operations control center: scan today's pipeline, filter by payment and warehouse, open an order, and run fulfilment through timeline and audit - never a flat editable list.
