

GroAurum

Admin Pricing Management v1

Wholesale SKU trade prices with history and scheduled future prices
Generated: July 16, 2026
apps/admin-web · UI shell only · Phase 3 adapters (af9e616)

This is NOT a simple editable price table. Operators schedule append-only trade price records. History is never overwritten.

1. Purpose

Manage wholesale SKU trade prices with historical records and scheduled future prices inside the GroAurum Admin shell. Sidebar navigation is unchanged; Pricing is a full module instead of a placeholder.

2. Design Principles

- Professional SaaS, desktop-first, high information density
- GroAurum Design System - white cards, green branding, 8px spacing
- Append-only pricing architecture - never overwrite history
- Reusable admin components (Card, Badge, Button, Tabs, tables)
- Typed fixtures only - no backend mutations in v1

3. SKU Price List

Route: /pricing

Column	Meaning
SKU	Name + code - links to detail
Product	Parent product name
Current Price	Live trade price label
Future Price	Next scheduled price, or -
Effective Date	Live effective-from (or focus date)
Status	Live / Scheduled / Expired
Updated	Last update timestamp label

4. SKU Detail

Route: /pricing/:skuld

- Current Price - live trade price, effective window, notes, append-only footnote
- Price History - newest-first timeline of immutable records
- Scheduled Prices - future records with Cancel affordance (UI-only)
- Schedule Price panel - New Price, Effective Date, Notes

5. Schedule Price

- New Price - trade price amount input
- Effective Date - date the record becomes live
- Notes - optional reason for the schedule
- Submit creates a new append-only record in real systems (stubbed in v1)

6. Price History

Append-only timeline. Live and expired records retain their values. Prior prices are closed with an effective-to date when superseded - they are never edited in place.

7. Status

- Live - currently effective trade price
- Scheduled - future price waiting to become live
- Expired - closed historical record
- Cancelled - reserved for cancelled scheduled rows

8. Quick Actions

- Schedule Price - focuses schedule / scheduled tab
- Cancel Scheduled Price - opens scheduled tab (mutation deferred)
- View History - opens Price History tab

9. Data Preparation

```
apps/admin-web/src/data/pricing-types.ts
apps/admin-web/src/data/pricing-fixtures.ts
# SKU_PRICE_LIST_FIXTURE + SKU_PRICING_DETAIL_FIXTURES
# Replace with Supabase append-only price queries
```

10. Files

- pages/pricing/PricingListPage.tsx - SKU price list + quick actions
- pages/pricing/PricingDetailPage.tsx - tabs + schedule form
- components/pricing/* - list, current, history timeline, scheduled, form, actions
- App.tsx - /pricing and /pricing/:skuld routes

11. Validation

Check	Result
pnpm --filter @groaurum/admin-web typecheck	Pass
pnpm --filter @groaurum/admin-web build	Pass
Sidebar / Dashboard / Products	Unchanged
Backend mutations	Not implemented (by design)

12. How to Review

```
pnpm dev:admin
# Open http://localhost:5173/pricing
# AKH-LA-10 - live + scheduled future price
# KIS-EL-CTN - scheduled status with future price
# MIX-LEG-CTN - expired history only
```

13. Out of Scope

- Supabase schedule / cancel / activate mutations
- In-place price edits (intentionally forbidden)
- Bulk price upload / CSV tools
- Customer-facing price display wiring from this module

14. Intent

Pricing Management should feel like a wholesale trade-book console: see live and future prices at a glance, inspect immutable history, and schedule the next price without ever rewriting the past.
