

GroAurum

Admin Product Management v1

Wholesale product, SKU, pricing, inventory readiness, and publication

Generated: July 16, 2026

apps/admin-web · UI shell only · Phase 3 adapters (af9e616)

This is NOT a simple CRUD page. Operators manage catalogue readiness and publish status with a checklist before a product goes live.

1. Purpose

Allow administrators to manage wholesale products, SKUs, pricing readiness, inventory readiness, and publication status inside the GroAurum Admin shell. Sidebar navigation is unchanged; Products is a full module instead of a placeholder.

2. Design Principles

- Professional SaaS, desktop-first, high information density
- GroAurum Design System - white cards, green branding, 8px spacing
- No clutter, no marketing widgets
- Reusable admin components (Card, Badge, Button, Tabs, tables)
- No backend CRUD in v1 - typed fixtures ready for Supabase later

3. Product List

Route: /products

Column	Meaning
Product	Name - links to detail
Category	Assigned catalogue category
SKU Count	Number of SKUs under the product
Current Trade Price	Primary priced SKU label, or - if not ready
Inventory Status	In stock / Low / Out / Not tracked
Publish Status	Draft / Published / Archived
Updated	Last update timestamp label

4. Product Detail

Route: /products/:productId

- Overview - category, statuses, SKU count, trade price, timestamps, description
- SKUs - code, grade, selling unit, MOQ, step, packs/carton, price, inventory
- Price History - append-only style trade price rows
- Inventory - movement readiness table (receipts / sales / adjustments)
- Images - file labels with primary/gallery role

5. Product Status

- Draft - work in progress; may fail publish checklist
- Published - live for catalogue consumption when checklist is complete
- Archived - retained historically; archive/publish actions disabled

6. Publish Checklist

Before Publish is enabled, every checklist item must be ready:

- Category
- Image
- SKU
- Current Price
- MOQ
- Selling Unit
- Inventory

Checklist is derived by `buildPublishChecklist()` from product readiness flags. `canPublish` is true only when all items pass and the product is not archived.

7. Quick Actions

- Add Product
- Duplicate Product
- Archive
- Publish (disabled until checklist ready; disabled when already published/archived)

Actions are UI-only stubs in v1 - handlers are no-ops until backend CRUD exists.

8. Data Preparation

```
apps/admin-web/src/data/product-types.ts
apps/admin-web/src/data/product-fixtures.ts
# PRODUCT_LIST_FIXTURE + PRODUCT_DETAIL_FIXTURES
# Replace with Supabase catalogue / price / inventory queries
```

9. Files

- pages/products/ProductListPage.tsx - list + list-level quick actions
- pages/products/ProductDetailPage.tsx - tabs + checklist + actions
- components/products/* - table, badges, checklist, tabs content, actions
- components/ui/Tabs.tsx - reusable admin tabs
- App.tsx - /products and /products/:productId routes

10. Validation

Check	Result
pnpm --filter @groaurum/admin-web typecheck	Pass
pnpm --filter @groaurum/admin-web build	Pass
Sidebar / Dashboard layout	Unchanged
Backend CRUD	Not implemented (by design)

11. How to Review

```
pnpm dev:admin
# Open http://localhost:5173/products
# Akhrot Giri - published, checklist complete
# Kashmiri Chilli - draft, missing image blocks Publish
# Festival Assortment - incomplete draft
# Legacy Gift Mix - archived
```

12. Out of Scope

- Supabase create / update / archive / publish mutations
- Image upload and media storage
- Live price history and inventory ledgers
- Categories / Pricing module UIs beyond Products

13. Intent

Product Management should feel like a wholesale catalogue control room: see readiness at a glance, inspect SKUs and commercial history, and publish only when category, image, SKU, price, MOQ, selling unit, and inventory are ready.
