

# GroAurum

## Admin Reports & Analytics v1

Executive analytics center for business decisions

Generated: July 16, 2026

apps/admin-web · UI shell only · Phase 3 adapters (af9e616)

*This is NOT a collection of random charts. Every report answers a business question for owners and managers of the wholesale operation.*

## 1. Purpose

---

Provide an Executive Analytics Center inside the GroAurum Admin shell. Sidebar navigation is unchanged; Reports replaces the placeholder module. Focus is decision support across sales, products, customers, salesmen, delivery, and inventory.

## 2. Design Principles

---

- Professional SaaS, desktop-first, high information density
- GroAurum Design System - white cards, green branding, 8px spacing
- Every report includes a business question it answers
- Typed fixtures only - no backend queries in v1
- Placeholder charts only - reusable PlaceholderChart component
- Do not redesign prior modules

## 3. Dashboard KPIs

---

Route: /reports

- Revenue Today
- Revenue This Month
- Orders Today
- Active Customers
- Inventory Value
- Delivery Success Rate

## 4. Filters

---

- Date Range
- Category
- Area
- Salesman
- Warehouse
- Customer

Filters are UI state in v1. They prepare the control surface for later warehouse / analytics queries.

## 5. Export

---

- PDF
- Excel
- CSV

Export buttons are stubs - no file generation in v1.

## 6. Report Sections

---

| Section   | Reports                                                                 |
|-----------|-------------------------------------------------------------------------|
| Sales     | Revenue by Day / Month / Category / Salesman / Area; AOV                |
| Products  | Top selling, slow moving, category & SKU performance, OOS, near reorder |
| Customers | New / active / inactive, repeat rate, top customers, growth             |
| Salesmen  | Revenue, orders, new retailers, activation, AOV, visit completion       |
| Delivery  | Routes completed, success, failed, COD collected, avg delivery time     |
| Inventory | Value, reserved, stock movement, low stock, turnover (placeholder)      |

## 7. Decision Design

---

Each report card shows a title, the business question it answers, optional headline metric, and a placeholder chart or dense table. Charts are visual shells (bar / line / donut) - not a charting library.

## 8. Data Preparation

```
apps/admin-web/src/data/reports-types.ts
apps/admin-web/src/data/reports-fixtures.ts
# REPORTS_SNAPSHOT_FIXTURE
# sections[] with question-driven ReportMetricCard
# Replace with warehouse / analytics queries
```

## 9. Files

- pages/reports/ReportsPage.tsx - KPIs, filters, export, section tabs
- components/reports/PlaceholderChart.tsx - bar / line / donut shells
- components/reports/ReportCard.tsx - question + metric + chart/table
- components/reports/ReportsFilters.tsx - date / category / area / etc.
- components/reports/ReportsExportActions.tsx - PDF / Excel / CSV stubs
- App.tsx - /reports route

## 10. Validation

| Check                                       | Result                      |
|---------------------------------------------|-----------------------------|
| pnpm --filter @groaurum/admin-web typecheck | Pass                        |
| pnpm --filter @groaurum/admin-web build     | Pass                        |
| Sidebar / prior modules                     | Unchanged                   |
| Backend queries / exports                   | Not implemented (by design) |

## 11. How to Review

```
pnpm dev:admin
# Open http://localhost:5173/reports
# Switch Sales / Products / Customers / Salesmen / Delivery / Inventory
# Confirm each card shows a business question
# Inventory Turnover shows Placeholder badge
```

## 12. Out of Scope

- Live warehouse / Supabase analytics queries
- Real chart library integration (Recharts, etc.)
- Actual PDF / Excel / CSV file generation
- Saved report packs or scheduled email digests
- Drill-down into operational modules from chart points

## 13. Intent

Reports & Analytics should feel like an executive decision surface for wholesale distribution: see revenue health, product risk, retail growth, field productivity, last-mile execution, and inventory capital - not a dashboard of decorative charts.
