

GroAurum

Admin Salesman Management v1

Field sales operations console
Generated: July 16, 2026
apps/admin-web · UI shell only · Phase 3 adapters (af9e616)

This is NOT an employee directory. Operators manage coverage, performance, onboarding progress, order generation, and daily field activity.

1. Purpose

Provide administrators with a Sales Operations Console inside the GroAurum Admin shell. Sidebar navigation is unchanged; Salesmen replaces the placeholder module. Focus is field productivity and retail coverage - not HR.

2. Design Principles

- Professional SaaS, desktop-first, high information density
- GroAurum Design System - white cards, green branding, 8px spacing
- Salesforce + Stripe Admin + Linear feel for wholesale distribution
- Typed fixtures only - no backend mutations in v1
- Reusable admin components (Card, Badge, Button, Tabs, KPI cards)
- Do not redesign prior modules (Dashboard, Products, Pricing, Inventory, Orders, Customers)

3. Salesman Dashboard KPIs

Route: /salesmen

- Active Salesmen
- Customers Assigned
- Orders This Month
- New Customers Added
- Pending Activations
- Today's Visits

4. Salesman List

Column	Meaning
Salesman Name	Field rep - links to detail
Territory	Coverage geography
Assigned Customers	Retail shops owned
Orders This Month	Tagged order volume
Collections	COD + online collected
Status	Active / On Leave / Inactive
Updated	Last activity stamp

Browse supports Search (name / territory), Status filter, Sort (A-Z, Orders, Customers, Updated), and Pagination.

5. Salesman Detail

Route: /salesmen/:salesmanId

- Overview - name, phone, employee ID, territory, joining date, status, assigned customers, total orders
- Assigned Customers - shop, area, status, last order, last visit, activation; View / Create Order / Reassign
- Orders - recent orders created / tagged to this salesman
- Daily Visits - timeline of planned, completed, and missed visits
- Collections - COD, online, pending, and collection history
- Performance - orders, revenue, new/repeat customers, activation rate, AOV

6. Status Model

- Active - currently operating in the field
- On Leave - temporarily unavailable
- Inactive - not in the active sales roster

7. Quick Actions

- Add Customer
- Create Order
- Send Invitation
- View Territory

Actions are UI stubs in v1 - they focus related tabs. Mutations deferred.

8. Daily Visits

- Timeline of today's planned visits
- Completed visits with optional notes
- Missed visits highlighted for follow-up

9. Performance Cards

- Orders This Month
- Revenue Generated
- New Customers
- Repeat Customers
- Activation Success Rate
- Average Order Value

10. Data Preparation

```
apps/admin-web/src/data/salesmen-types.ts
apps/admin-web/src/data/salesmen-fixtures.ts
# SALESMEN_SNAPSHOT_FIXTURE + SALESMAN_DETAIL_FIXTURES
# browseSalesmen() for search / filter / sort / pagination
# Replace with Supabase salesman / coverage / visit queries
```

11. Files

- pages/salesmen/SalesmenListPage.tsx - KPIs, browse, team table
- pages/salesmen/SalesmanDetailPage.tsx - six-tab operations console
- components/salesmen/* - badges, browse, table, tabs, visits timeline
- App.tsx - /salesmen and /salesmen/:salesmanId routes

12. Validation

Check	Result
pnpm --filter @groaurum/admin-web typecheck	Pass
pnpm --filter @groaurum/admin-web build	Pass
Sidebar / prior modules	Unchanged
Backend mutations	Not implemented (by design)

13. How to Review

```
pnpm dev:admin
# Open http://localhost:5173/salesmen
# Priya Sharma - active, full coverage + visits
# Neha Joshi - on leave
# Vikram Singh - inactive, empty visits
```

14. Out of Scope

- Supabase create / invite / reassign / visit check-in mutations
- Live GPS tracking or territory map editing
- HR payroll, attendance, or leave management systems
- Commission calculation engines

15. Intent

Salesman Management should feel like a sales operations console for wholesale distribution: see who is covering which shops, how orders and collections are tracking, and what happened on today's route - not an employee directory.
