

GroAurum

Admin Settings & System Configuration v1

Business configuration center for wholesale operations

Generated: July 16, 2026

apps/admin-web · UI shell only · Phase 3 adapters (af9e616)

This is NOT a generic settings page. Operators configure company identity, warehouses, coverage, payments, taxes, roles, and system preferences.

1. Purpose

Provide a Business Configuration Center inside the GroAurum Admin shell. Sidebar navigation is unchanged; Settings replaces the placeholder module. Focus is system-wide wholesale operating policy - not personal account prefs.

2. Design Principles

- Professional SaaS / ERP, desktop-first, high information density
- GroAurum Design System - white cards, green branding, 8px spacing
- Typed fixtures only - no backend mutations in v1
- Reusable settings components per configuration domain
- Do not redesign prior modules

3. Quick Actions

Route: /settings

- Update Company
- Add Warehouse
- Add Service Area
- Manage Roles

Actions are UI stubs in v1 - they focus related tabs. Mutations deferred.

4. Configuration Sections

Section	Contents
Company Profile	Name, GST, PAN, email, phone, logo, business address
Warehouses	Name, code, address, manager, status; Add / Edit / Disable
Service Areas	Area, city, delivery days, slots, status
Delivery Slots	Morning, Afternoon, Evening, Custom Slot
Payments	COD, Online enabled; Credit disabled; gateway placeholder
Notifications	SMS, WhatsApp, Push, Email templates - view only
Taxes	GST %, HSN code, category mapping
User Roles	Super Admin, Ops, Warehouse, Sales, Delivery, Read Only
Preferences	Currency, timezone, date format, language

5. User Roles

- Super Admin - full system configuration
- Operations Manager - orders, delivery, customers
- Warehouse Manager - inventory and packing
- Sales Manager - salesmen and retail coverage
- Delivery Manager - routes and COD closeout
- Read Only - dashboards and reports

6. Payment Configuration

- COD - enabled
- Online - enabled
- Credit - disabled (wholesale default)
- Payment gateway credentials - future placeholder

7. Data Preparation

```
apps/admin-web/src/data/settings-types.ts
apps/admin-web/src/data/settings-fixtures.ts
# SETTINGS_SNAPSHOT_FIXTURE
# Replace with Supabase org / warehouse / policy settings
```

8. Files

- pages/settings/SettingsPage.tsx - quick actions + nine section tabs
- components/settings/* - profile, warehouses, areas, slots, payments, taxes, roles
- App.tsx - /settings route

9. Validation

Check	Result
pnpm --filter @groaurum/admin-web typecheck	Pass
pnpm --filter @groaurum/admin-web build	Pass
Sidebar / prior modules	Unchanged
Backend mutations	Not implemented (by design)

10. How to Review

```
pnpm dev:admin
# Open http://localhost:5173/settings
# Company Profile - GST / PAN / address
# Warehouses - Okhla active, Gurugram disabled
# Payments - COD + Online on, Credit off
# Notifications - view only templates
```

11. Out of Scope

- Supabase create / update / disable mutations
- Logo upload and document storage
- Payment gateway credential entry and live toggles
- Notification template editing / send tests
- Fine-grained ACL editor beyond role list
- Standalone /service-areas module (still placeholder; configured here)

12. Intent

Settings should feel like a wholesale ERP configuration center: company identity, warehouse network, delivery coverage, payment

policy, tax mapping, and operator roles - not a consumer app preference screen.
