

GroAurum

Customer Home Screen v1

Premium B2B home UI refinement for professional retailers

Generated: July 16, 2026

Built on Phase 3 adapters (af9e616)

Refined the existing customer home into a quieter wholesale experience (Stripe / Linear / Apple restraint) while preserving GroAurum green branding. No promo banners, coupons, wallet, ads, or floating quick-action FAB.

1. Goal

Treat the attached Home Screen mockup as the visual reference for Customer App v1. Do not redesign from scratch. Refine into a production-ready B2B UI for retailers: clear commercial information, calm hierarchy, 8px spacing, excellent whitespace.

2. Home Layout (top to bottom)

- Brand header + shop / location context
- Search field - placeholder: Search product, SKU, grade or size...
- Service card - Next Delivery / Tomorrow / Time Slot
- Trade prices strip - today's increase / decrease with clearer hierarchy
- Category tiles - premium muted icon tiles (not candy consumer chips)
- Featured SKUs - full-width B2B product cards
- Last order - Delivered / Paid / amount
- Sticky Review order bar only (primary floating action)

3. B2B Product Card Contract

Field	Display
Product image	Muted tile with product mark
Product name	Primary title
Grade / specification	Secondary commercial line
MOQ	Explicit MOQ value
Packs per carton	Shown when applicable
Stock status	In stock / Low stock / Out of stock
Trade price	Price + selling unit
Primary action	+ Add Carton or + Add N KG by SKU

4. Trade Price Cards

- Horizontal strip of commodity trade prices
- Clear amount and percent movement for today
- Increase / decrease / unchanged states with restrained color
- Unit shown beside trade price (KG or Carton)

5. Service Card

Replaced consumer "Delivery Tomorrow" copy with structured wholesale service info:

Next Delivery
Tomorrow
10:00 - 13:00

6. Last Order

Payment status is visible alongside fulfillment status:

Delivered
Paid
Rs 24,850

Mock mode shows a representative last-order snapshot when no live order exists yet, so retailers can evaluate the payment-status pattern.

7. Explicit Removals

- Marketing banner removed from home
- Floating Quick Action button removed
- No coupons, wallet, ads, flashy gradients, or gaming elements
- Sticky order bar remains the only primary floating CTA

8. Design System Notes

- GroAurum green primary / primaryDark retained
- Background softened to #F7FAF8; borders quieter
- Spacing grid aligned to 8px (8 / 16 / 24 / 32)
- Animations limited to subtle press opacity
- Category tiles use unified primarySoft surfaces

9. Files Touched

- apps/customer/app/(tabs)/index.tsx - home composition
- apps/customer/components/ProductCard.tsx - B2B card
- apps/customer/components/home/* - search, service, trade prices, categories, last order
- apps/customer/components/CartBar.tsx - Review order sticky bar
- apps/customer/types/index.ts + utils/product-b2b.ts - commercial fields
- apps/customer/services/mock/data.ts - wholesale-oriented mock catalogue
- apps/customer/services/home-summary.ts - trade/service/last-order helpers
- Search / category / product screens aligned to B2B card + add-step behavior

10. Validation

Check	Result
pnpm --filter @groaurum/customer typecheck	Pass
pnpm --filter @groaurum/customer lint	Pass
Mock mode home	Runnable with refined B2B layout

11. How to Review

```
pnpm dev:customer
# default adapter = mock
# pick a location, then review Home
```

12. Out of Scope

- Full TradeFlow / Restock redesign across the app
- Sales / Delivery / Admin UIs
- Payment gateway and live order placement against Supabase
- Production catalogue photography / Gurugram launch seeds
- Phase 4 backend workflows

13. Intent

This screen should feel closer to Stripe, Linear, and Apple than Blinkit: professional retailers scanning trade prices, MOQ, stock, and next delivery - not a consumer grocery feed.
