Customer Review Order v1

Wholesale order confirmation before submission
Generated: July 16, 2026
Aligned with Home / Restock v1 · Phase 3 adapters (af9e616)

This is NOT a consumer shopping cart. Retailers review shop context, SKU lines, estimated trade value, payment, and delivery address, then Confirm Order.

1. Purpose

Allow retailers to review and confirm today's wholesale order before submission. Entry points: Restock Review order bar and Home sticky order bar both open /cart, now titled Review Order.

2. Design Principles

- Professional B2B, calm interface, GroAurum design language
- 8px spacing grid
- No banners, coupons, wallet, or ads
- Home and Restock screens were not redesigned

3. Screen Layout

- Header - Review Order
- Shop summary - shop name, delivery schedule, sales executive
- Order items - image, name, grade, selling unit, stepper, unit price, line total
- Order summary - total items + estimated value
- Payment - Cash on Delivery / Pay Online
- Delivery address
- Notes (optional)
- Sticky bottom CTA - Confirm Order

4. Order Item Row

Field	Behavior
Product image	Catalogue mark
Product name	Primary title
Grade	SKU grade / specification
Selling unit	From SKU configuration
Quantity stepper	stepSkuQuantity (MOQ + step)
Unit price	Current trade price
Line total	trade price x quantity

5. Quantity Rules

Do not hard-code carton or KG logic in the Review Order UI. Steppers use the same SKU helpers as Restock:

```
stepSkuQuantity(product, currentQty, +1 | -1)
# Driven only by product.moq and product.quantityStep
```

6. Order Value

Estimated value is the sum of trade price x quantity across selected lines. No consumer delivery/handling fee strip, free-delivery thresholds, or coupon UI.

7. Payment Options

- Cash on Delivery - pay when delivery arrives
- Pay Online - UPI / card settlement path (UI selection; gateway not integrated)

8. Confirm Order Behavior

- Mock adapter: stock check, createOrder, clear cart, open order tracking
- Supabase adapter: Review Order UI available; submission deferred (coming soon alert)
- Optional notes field captured in UI for later backend wiring
- Legacy /checkout redirects to /cart (Review Order)

9. Files

- apps/customer/app/cart.tsx - Review Order v1 screen
- apps/customer/app/checkout.tsx - redirect to /cart
- apps/customer/app/_layout.tsx - header title Review Order
- apps/customer/components/review-order/* - shop, items, summary, payment, CTA

10. Validation

Check	Result
pnpm --filter @groaurum/customer typecheck	Pass
pnpm --filter @groaurum/customer lint	Pass
Home / Restock	Unchanged layout

11. How to Review

```
pnpm dev:customer
# Restock -> Review order OR Home sticky bar
# Confirm Order on Review Order screen
```

12. Out of Scope

- Payment gateway integration
- Supabase order placement persistence
- Assisted-order confirmation OTP
- Home / Restock visual redesign

13. Intent

Review Order should feel like confirming a wholesale purchase order: shop context, commercial lines, payment choice, and a single Confirm Order action - not a Blinkit-style consumer checkout.
