

GroAurum

Blinkit-style Customer MVP

Project summary document

Premium dry-fruits quick-commerce app

Generated: July 15, 2026

This document describes what has been built so far in the blinkit-mvp repository: screens, features, architecture, demo data, and how to run the app.

1. Project Overview

GroAurum is a customer-facing quick-commerce mobile/web app inspired by Blinkit. Users pick a delivery location, browse a nearby dark store catalog, add items to cart, checkout with simulated payment, and track order progress in real time.

The MVP is fully client-side: all catalog, inventory, geo, and order logic runs in-memory under services/mock/. It is designed to be swapped for a real backend later.

Current status: Feature-complete for v1 demo. All work is local and uncommitted in git (1 initial Expo commit only).

2. Tech Stack

Layer	Technology
Framework	Expo 57, React Native 0.86, React 19
Language	TypeScript
Routing	Expo Router (file-based)
State	Zustand (cart, location, session)
Data fetching	TanStack React Query
Platforms	iOS, Android, Web

3. Features Built

- Location gate with serviceability check (3 demo dark stores + 1 out-of-area demo)
- Store-scoped catalog with 6 categories and 20 products per hub (60 SKUs total)
- Home screen with promo banner, category chips, bestsellers, and product grid
- Search with live filtering by product name and category
- Product detail with stock info, qty controls, and similar items
- Cart with live stock checks, bill breakdown, and substitute suggestion on OOS
- Checkout with guest details, optional mock OTP (1234), and UPI/Card/COD payment
- Order tracking with 4-step timeline and simulated rider progress
- Orders history tab with live status polling
- Floating cart bar across browse screens

4. Screens & Routes

Route	File	Purpose
/	app/index.tsx	Gate: redirect to location or home tabs
/location	app/location.tsx	Pick delivery address from 4 demo pins
/(tabs)	app/(tabs)/index.tsx	Home: categories, bestsellers, products
/(tabs)/search	app/(tabs)/search.tsx	Search products
/(tabs)/orders	app/(tabs)/orders.tsx	Order history list
/category/[id]	app/category/[id].tsx	Category product grid
/product/[id]	app/product/[id].tsx	Product detail page
/cart	app/cart.tsx	Cart review and bill
/checkout	app/checkout.tsx	Guest info, OTP, payment, place order
/order/[id]	app/order/[id].tsx	Live order tracking

5. UI Components

- AppProviders - React Query provider wrapper
- BrandLogo - GroAurum wordmark
- ProductCard - Product tile with price, discount, qty button
- QtyButton - ADD / +/- quantity stepper
- CartBar - Fixed bottom bar with cart total and View cart CTA
- StatusTimeline - 4-step order progress (Placed to Delivered)
- EmptyState - Centered empty placeholder with optional action
- LoadingBlock - Full-screen loading spinner

6. State Management (Zustand)

- location.ts - address, store, distance, serviceable flag
- cart.ts - cart lines, single-store enforcement, stock-aware add/setQty
- session.ts - guest name and phone for checkout prefill
- hooks.ts - useCartTotals, useCartItemCount

7. Mock API (services/mock/)

- data.ts - Seed categories, stores, addresses, 60 store-scoped products
- geo.ts - Haversine distance, nearest store lookup, service radius check
- catalog.ts - Async catalog/search APIs with ~100-180ms delay
- orders.ts - Pricing, stock validation, order creation, status simulator

8. Demo Data

Dark stores (Delhi/NCR):

- Connaught Place (store-cp) - 10 min ETA, 4 km radius
- Saket (store-saket) - 12 min ETA, 4 km radius
- Noida Sec 18 (store-noida) - 11 min ETA, 5 km radius

Demo addresses:

- Home (Connaught Place) - serviceable
- Office (Saket) - serviceable
- Parents (Noida) - serviceable
- Far Away (Agra) - NOT serviceable (demo edge case)

Categories (6): Luxury 6, Nuts, Raisins, Dates & Figs, Seeds, Mixes

Products: 20 premium dry-fruit SKUs per store (Akhrot Giri, Kesar Badam, Kaju W320, Chilgoza, Diwali Gift Box, etc.). Prices range from Rs 110 to Rs 899. Demo stock edge cases at CP hub: Chilgoza stock = 1, Diwali Gift Box = 0 (OOS).

9. Pricing Rules

- Delivery fee: Rs 39 (free when subtotal $\geq$ Rs 499)
- Handling fee: Rs 9
- Mock OTP code: 1234 (optional field)
- Order ID format: GA-{timestamp}

10. Key User Flows

Flow A - Onboarding & Browse:

- App opens -> location gate if no serviceable address
- Pick demo address -> nearest hub assigned -> Home tab loads catalog
- Browse categories, bestsellers, or tap product for detail

Flow B - Cart & Checkout:

- Add items via ProductCard or QtyButton on any browse screen
- CartBar appears -> View cart -> review bill -> Proceed to checkout
- Stock validation runs; OOS items can be removed or substituted
- Enter guest details, optional OTP, pick payment -> Place order

Flow C - Order Tracking:

- Redirected to /order/[id] after placement
- Status auto-advances every 3.5s: Placed -> Packing -> Out for delivery -> Delivered
- Rider progress bar shown during delivery stages
- Orders tab lists all orders with live polling (every 2s)

11. Navigation Map

```

App launch
  |
  v
index.tsx --> (no address) --> /location
  |                               |
  +-- (serviceable) --> /(tabs) <--+
      |
      +-- Home --> /category/[id], /product/[id]
      +-- Search --> /product/[id]
      +-- Orders --> /order/[id]

CartBar --> /cart --> /checkout --> /order/[id]

```

12. Project Structure

```

blinkit-mvp/
  app/           Screens (Expo Router)
  components/    Reusable UI components
  store/         Zustand stores + hooks
  services/mock/ In-memory catalog, geo, orders
  types/         Shared TypeScript models
  constants/     Design tokens (theme.ts)
  assets/images/ App icon, splash, favicon

```

13. How to Run

```

cd blinkit-mvp
npm install
npx expo start

```

Open in Expo Go, an emulator, or press w for web.

14. What's NOT in v1

- Real payments, GPS, SMS, or rider apps
- Persistent storage (state resets on app restart)
- Real backend API (mock only)
- User authentication (guest checkout only)

15. Suggested Next Steps

- Commit current MVP work to git
- Connect to a real backend API
- Add persistent cart and session storage
- Real location via device GPS
- Push notifications for order updates
