

GroAurum Admin ERP

Sprint 5.1 Closure Report

Date: 2026-07-17

Closes Phase 2.5 Production Readiness Audit blockers (no new product features).

OVERALL: Audit blockers closed for live Admin ERP reads + ADMIN JWT mutations.
Remaining PARTIAL items are intentional deferrals (analytics charts, documents/visits tables, dedicated salesman-create UI).

1. Audit Blocker Scorecard

PASS	1. Create apps/admin-web/.env.local Generated from local supabase status with VITE_DATA_ADAPTER=supabase, URL, anon key, auth provider, and dev credentials.
PASS	2. Configure adapter + Supabase URL/anon .env.local and .env.example updated. Adapter resolves to supabase when env is present.
PASS	3. Replace mock auth with real Supabase Auth createSupabaseAuthProvider maps profiles.roles -> AppRole, signs in via shared client. Dev auto-sign uses admin@groaurum.local.
PASS	4. Wire authenticated JWT into LiveAdminApi / repos getAdminSupabaseClient() singleton shared by auth + adminDataClient / LiveAdminApi.
PASS	5. Categories CRUD UI /categories uses CategoriesListPage with create/update/softDelete hooks (no PlaceholderPage).
PASS	6. Complete SKU CRUD (repo/service/hooks/UI) CrudServices create/update/softDeleteSku + mutation hooks + ProductSkusTab create/activate/archive.
PASS	7. Wire mutation hooks (Pricing/Inventory/Customers/Orders/Salesmen/Delivery) Pricing schedule/close; Inventory adjust; Customers create/reassign; Orders status; Salesmen add-customer/create-order; Delivery create/assign/close.
PASS	8. Verify mutations under ADMIN role scripts/verify_sprint51_admin_mutations.mjs: 10/10 PASS after seed auth fix + admin write RLS migration.
PARTIAL	9. Replace hardcoded placeholders where practical Inventory incoming/reorder show em dash; payment gateway fallback cleaned. Reports charts, documents[], visits[], activity[] remain until domain tables/analytics sprint.
PASS	10. Produce Sprint 5.1 Closure Report This document.

2. What Changed

- Shared admin Supabase client (apps/admin-web/src/lib/adminSupabaseClient.ts)
- Real createSupabaseAuthProvider in @groaurum/auth; stub retained as fallback without client
- Seed auth.users token defaults + auth.identities so GoTrue password grant works
- Migration 20260716170001_sprint51_admin_write_policies.sql for inventory/orders/delivery/prices
- CategoriesListPage; SKU service/hooks/UI; mutation wiring across modules
- Verification script: scripts/verify_sprint51_admin_mutations.mjs

3. ADMIN Mutation Probe Results

- PASS ? auth.signIn
- PASS ? categories.insert / update
- PASS ? skus.insert
- PASS ? sku_prices.insert
- PASS ? inventory_balances.update
- PASS ? shops.insert
- PASS ? settings.update
- PASS ? delivery_routes.insert
- PASS ? products.update

4. Remaining PARTIAL / Deferred

- useCreateSalesmanMutation: no Add Salesman quick action (needs new auth.users); Salesmen actions use customer/order hooks instead
- Service Areas route still PlaceholderPage
- Reports PlaceholderChart / analytics snapshots
- Customer documents / salesman visits empty arrays (no backing tables)
- Dedicated login screen still deferred (dev auto-sign-in)

5. How to Run Locally

- pnpm db:start && apply migrations; pnpm db:seed:sprint4 (or re-seed auth patch)
- Ensure apps/admin-web/.env.local exists (copy from .env.example + anon key from supabase status)
- pnpm --filter @groaurum/admin-web dev
- node scripts/verify_sprint51_admin_mutations.mjs

Sprint 5.1 complete. Ready to begin Sprint 6 with live Admin ERP + ADMIN JWT CRUD foundation.
