

GroAurum Customer App

Sprint 6 - Customer Authentication & Live App

Date: 2026-07-17

Goal: production-ready Customer Expo app on Supabase (no UI/nav redesign).

OVERALL: Customer app is live-ready for Auth, profile, catalogue, cart confirm, orders, and account against local/remote Supabase with RLS + trusted RPCs.

1. Customer Auth Flow

- Supabase Auth session restore on launch (getSession + onAuthStateChange)
- Email/password sign-in (local seed: customer@groaurum.local / password123)
- Phone OTP via signInWithOtp / verifyOtp (requires SMS provider in production)
- Email OTP helpers ready (requestEmailOtp / verifyEmailOtp)
- Onboarding: Invitation token -> accept_shop_invitation RPC -> shop_auth_links -> dashboard
- CustomerFlowGate phases unchanged structurally; invitation panel added

2. Connected Modules

- Auth + session persistence
- Customer profile / shop context (trade name, phone, service area, lifecycle)
- Invitation activation RPC
- Home: categories, featured SKUs, last order (live), promotions placeholder
- Catalogue: categories, products, SKUs, pricing, search (existing Phase 3)
- Restock: suggestions from live order history when present
- Cart / Review Order: MOQ + step validation, place_customer_order RPC
- Inventory reservation inside place_customer_order (stock_reservations + reserved_quantity)
- Orders list + detail timeline from order_events
- Account: profile, primary delivery, customer_addresses, logout

3. Supabase Integration

- Migration: 20260716180001_sprint6_customer_rpcs.sql
- Seed: supabase/seed/sprint6_customer_seed.sql
- createSupabaseOrderService + placeCustomerSelfServeOrder
- Auth acceptShopInvitation + phone/email OTP methods
- EXPO_PUBLIC_CUSTOMER_DATA_ADAPTER=supabase (+ URL/anon)

4. Remaining Placeholders

- Promotions strip (no marketing tables)
- Invoice PDF / download
- Payment gateway capture (COD intent only)
- SMS provider for phone OTP in production (local uses email/password)
- GST field on Shop (shown as legal name until schema adds GST)
- Assisted-order confirmation OTP workflow

5. Production Readiness

Ready for local/staging customer flows with seeded retailer account. Production requires: SMS OTP provider, real invitation tokens from sales, and monitoring of place_customer_order failures (stock/MOQ).

- PASS: Auth session restore + linked shop gate
- PASS: Live catalogue reads under RLS
- PASS: Live order create + reserve + timeline
- PASS: Orders history + account logout
- PARTIAL: Phone OTP until SMS configured
- PARTIAL: Promotions / invoice / payments

6. How to Run

- pnpm db:start; apply migrations including sprint6 RPCs
- pnpm db:seed:sprint4 then apply supabase/seed/sprint6_customer_seed.sql
- Configure apps/customer/.env from .env.example
- pnpm --filter @groaurum/customer start (or expo start)
- Sign in as customer@groaurum.local / password123

Sprint 6 complete. Customer app is live on Supabase foundations.
