

GroAurum Salesman PWA

Sprint 7 - Live Salesman PWA

Date: 2026-07-17

Goal: production-ready Salesman Vite PWA on Supabase (shared UI/auth, no redesign).

OVERALL: apps/sales-pwa converted from scaffold to a live field PWA with Supabase Auth (SALESMAN), dashboard KPIs, retailer create/invite, assisted orders, visit tracking, and performance aggregates.

1. Salesman Auth Flow

- Supabase Auth via @groaurum/auth createAuthProvider + SessionProvider
- Audience gate: sales_pwa; role required: salesman / SALESMAN
- Session persist + restore (shared Supabase client for auth + data)
- Dev auto sign-in: salesman1@groaurum.local / password123
- Login page available at /login; ProtectedSalesRoute wraps shell

2. Connected Modules

- Dashboard: assigned retailers, today's visits, pending activations, orders, revenue
- Customers: assigned retailers list + profile detail
- Create retailer: salesman_create_retailer RPC (shop + contact + assignment)
- Send invitation: salesman_create_invitation RPC (token for customer onboarding)
- Reassign: admin-controlled only (PWA shows read-only note)
- Assisted order: place_assisted_order RPC (MOQ, live price, stock, reserve)
- Customer confirmation OTP: placeholder challenge row + UI message (SMS deferred)
- Visits: sales_visits table (PLANNED / PENDING / VISITED / MISSED) + status updates
- Performance: monthly orders, revenue, new retailers, activation rate, repeat customers

3. Supabase Integration

- Migration: 20260716190001_sprint7_salesman_visits_and_rpcs.sql
- Seed: supabase/seed/sprint7_salesman_seed.sql
- api-client: createSupabaseSalesmanService
- RLS: salesman scoped via salesman_shop_ids(); visit policies for own rows
- Assisted onboarding handoff uses Sprint 6 accept_shop_invitation on customer app

4. Remaining Placeholders

- Real SMS delivery for invitation + assisted-order OTP
- OTP verify / confirm assisted order (challenge row exists; verify UX deferred)
- Offline / service-worker caching beyond basic PWA manifest
- Push notifications for visit reminders
- Collections / payment capture in field PWA
- Map-based route optimization

5. Production Readiness

Ready for local/staging salesman field flows with seeded salesman1 account. Production requires SMS providers, hardened invitation distribution, and monitoring of place_assisted_order / create retailer RPCs.

- PASS: Auth session restore + SALESMAN role gate
- PASS: Live dashboard / retailers / performance under RLS
- PASS: Create retailer + invitation token generation
- PASS: Assisted order MOQ/stock/reserve + timeline events
- PASS: Visit tracking CRUD for today's route
- PARTIAL: Customer confirmation OTP (placeholder only)
- PARTIAL: PWA install/offline (manifest only)

6. How to Run

- pnpm db:start; apply Sprint 7 migration + sprint7_salesman_seed.sql
- Copy apps/sales-pwa/.env.example to .env.local (anon key from supabase status)
- pnpm dev:sales (http://127.0.0.1:5174)
- Sign in as salesman1@groaurum.local / password123
- Invite token demo: sprint7-salesman-invite-token (customer accept flow)

Sprint 7 complete. Salesman PWA is live on Supabase foundations.
