

GroAurum Delivery PWA

Sprint 8 - Live Delivery PWA

Date: 2026-07-17

Goal: production-ready Delivery Vite PWA on Supabase (shared UI/auth, no redesign).

OVERALL: apps/delivery-pwa converted from scaffold to a live field PWA with Supabase Auth (DELIVERY), dashboard KPIs, route/stop workflow, COD collection, and route completion summary.

1. Delivery Auth Flow

- Supabase Auth via @groaurum/auth createAuthProvider + SessionProvider
- Audience gate: delivery_pwa; role required: delivery_executive / DELIVERY
- Session persist + restore; ProtectedDeliveryRoute on shell
- Dev auto sign-in: delivery1@groaurum.local / password123

2. Connected Modules

- Dashboard: today's routes, assigned deliveries, COD pending, completed, failed
- Route management: assigned routes, ordered stops, customer/address details
- Navigation link placeholder (Google Maps search URL)
- Workflow: Start route (Loaded/OFD) -> stop in progress -> delivered / failed
- Confirmation: status, timestamp via attempts, notes, photo/signature placeholders
- COD: expected amount, collect amount, paid status, collection history
- Route completion: close route when stops done; COD reconciliation summary
- Returned status: deferred (future)

3. Supabase Integration

- Migration: 20260716200001_sprint8_delivery_rpcs.sql
- Seed: supabase/seed/sprint8_delivery_seed.sql
- api-client: createSupabaseDeliveryService
- RPCs: delivery_start_route, mark_stop_in_progress, complete_stop, fail_stop
- RPCs: delivery_collect_cod, delivery_complete_route
- Trusted GUC groaurum.trusted_server_action for order/payment updates
- RLS: delivery_route_ids() scopes assigned routes to the executive

4. Remaining Placeholders

- Photo blob capture / storage (boolean placeholder only)
- Customer signature capture / storage (boolean placeholder only)
- Native turn-by-turn navigation SDK (Maps URL only)
- Returned / RTO workflow
- Offline service worker beyond PWA manifest
- Push notifications for route assignment

5. Production Readiness

Ready for local/staging delivery field flows with seeded delivery1 account and today's PLANNED route. Production requires media storage for POD, hardened COD reconciliation reporting, and device GPS/navigation integration.

- PASS: Auth session restore + DELIVERY role gate
- PASS: Live dashboard / routes / stops under RLS
- PASS: Start route + OFD order transitions
- PASS: Deliver / fail with attempt notes + placeholders
- PASS: COD collect + history + route close summary
- PARTIAL: Photo/signature (flags only, no files)
- PARTIAL: Navigation (external Maps link)

6. How to Run

- pnpm db:start; apply Sprint 8 migration + sprint8_delivery_seed.sql
- Copy apps/delivery-pwa/.env.example to .env.local
- pnpm dev:delivery (http://127.0.0.1:5175)
- Sign in as delivery1@groaurum.local / password123

Sprint 8 complete. Delivery PWA is live on Supabase foundations.
