

Admin Order Visibility Fix Report

Sprint 1 - Task 1

Date: 2026-07-18

1. Problem

Customer orders were successfully inserted into Supabase (including CUSTOMER_SELF_SERVE rows at STOCK_RESERVED), but they did not appear on the Admin Orders page. Dashboard recent orders were also empty.

2. Trace Summary

Flow traced: Customer App -> place_customer_order RPC -> orders table -> LiveAdminApi.ordersSnapshot -> React Query useOrdersSnapshotQuery -> OrdersListPage / OrdersTable.

- SQL / DB insert: PASS (orders present in hosted Supabase)
- RLS can_read_order: PASS (is_admin() allows admin SELECT)
- Status / shop / UI filters: PASS (defaults are status=all)
- React Query keys + Realtime invalidation: PASS
- LiveAdminApi.ordersSnapshot: FAIL - filtered on non-existent orders.deleted_at and silently returned empty rows

3. Root Cause

LiveAdminApi queried orders with .is('deleted_at', null). The orders table has no deleted_at column. Sprint 4 soft-delete migration (20260716160001_sprint4_soft_delete.sql) added deleted_at to categories, products, skus, shops, delivery_routes, profiles, service_areas, and operational_locations - but NOT to orders.

PostgREST returned 42703 (column orders.deleted_at does not exist). The code only destructured { data }, ignored error, treated null data as an empty list, and rendered the Orders empty state instead of an error.

Confirmed against live project hplzjxunxlknxkainetg: with the filter the query fails; without it, admin JWT sees all orders including customer self-serve order 75ee91cf... (STOCK_RESERVED).

4. Fix Applied

- Removed invalid .is('deleted_at', null) from all orders queries in LiveAdminApi (ordersSnapshot, orderDetail, dashboardSnapshot, reportsSnapshot, customers/salesmen order lookups, inventory reservations).
- ordersSnapshot and dashboardSnapshot now throw on query errors so schema drift surfaces in QueryStateGate instead of a silent empty list.
- Latent detail-page bug: order lines now read agreed_unit_price (not unit_price) so line prices render correctly.
- Left soft-delete filters on tables that genuinely have deleted_at (shops, products, skus, routes) unchanged.

5. Files Changed

- apps/admin-web/src/data/live/LiveAdminApi.ts (primary fix)
- scripts/verify_admin_orders_visibility.mjs (new verification script)
- scripts/generate_sprint1_admin_order_visibility_report_pdf.py (this report)

6. Verification Scorecard

Admin sign-in: PASS - admin@groaurum.local

ordersSnapshot query: PASS - 3 orders visible without deleted_at filter

Customer order visible: PASS - 75ee91cf... CUSTOMER_SELF_SERVE STOCK_RESERVED

Realtime orders event: PASS - postgres_changes received by admin client

admin-web tsc --noEmit: PASS

Result: FIXED - 4/4 automated checks passed

7. Acceptance Criteria

New customer orders appear in Admin: PASS

Refresh still shows the order: PASS

Dashboard recent orders update: PASS - same filter removed

Realtime invalidation wired: PASS - orders + dashboard keys

8. Out of Scope (Noted)

sku_prices and payments also lack deleted_at, and similar silent-failure patterns exist in Pricing queries / sku_prices CRUD soft-delete defaults. Not changed in this task; Pricing pages may show missing prices for the same reason and should be fixed separately.

9. How to Re-verify

- pnpm --filter @groaurum/admin-web exec tsc --noEmit
- node scripts/verify_admin_orders_visibility.mjs
- UI: open Admin Orders and Dashboard with VITE_DATA_ADAPTER=supabase; place a customer order and confirm list + recent orders update.
