

Product Management Completion Report

Sprint 1 - Task 2

Date: 2026-07-18

1. Objective

Make the Admin Product module fully operational using the existing architecture: list/search, create, edit, soft-delete, SKU CRUD, detail tabs, React Query invalidation, and proper loading/error states.

2. Root Causes

- Write UI missing: useCreateProductMutation / useUpdateProductMutation existed but no create/edit forms; Add Product was a no-op.
- SKU create incomplete: only code + name collected; pack size, unit, MOQ, and related fields were hardcoded.
- Product list had no search/filter UI despite live repository data.
- sku_prices.deleted_at filter failed silently (column does not exist), breaking trade price and price history in live mode.
- productType missing from ProductDetail VM; SKU tab inferred type from first SKU instead of the product row.

3. Features Completed

- Product list from Supabase: DONE
- Search + status/category filter: DONE
- Create product: DONE - name, category, description, type, status -> Supabase
- Edit product: DONE - all editable schema fields
- Soft-delete / archive: DONE - list hide + detail redirects to /products
- SKU create / edit / archive: DONE - code, pack/size, unit, MOQ, step, status
- Detail tabs: DONE - Overview, SKUs, Inventory, Price History, Images (read-only)
- React Query invalidation: DONE - existing mutations wired
- Loading / success / error states: DONE

4. Files Changed

- apps/admin-web/src/pages/products/ProductListPage.tsx (+ CSS)
- apps/admin-web/src/pages/products/ProductDetailPage.tsx (+ CSS)
- apps/admin-web/src/components/products/ProductFormModal.tsx (+ CSS) [new]
- apps/admin-web/src/components/products/ProductsBrowseBar.tsx [new]
- apps/admin-web/src/components/products/ProductOverviewTab.tsx (+ CSS)
- apps/admin-web/src/components/products/ProductSkusTab.tsx (+ CSS)
- apps/admin-web/src/components/products/ProductImagesTab.tsx (+ CSS)
- apps/admin-web/src/components/products/ProductQuickActions.tsx
- apps/admin-web/src/data/product-types.ts
- apps/admin-web/src/data/product-fixtures.ts
- apps/admin-web/src/data/live/LiveAdminApi.ts
- scripts/verify_admin_product_crud.mjs [new]
- scripts/generate_sprint1_product_management_report_pdf.py [this report]

5. Verification Scorecard

- Admin sign-in: PASS
- Categories available: PASS
- Create Product: PASS
- Edit Product: PASS
- Create SKU: PASS
- Edit SKU: PASS

Archive SKU (soft-delete): PASS

SKU hidden after archive: PASS

Archive Product (soft-delete): PASS

Product hidden after archive: PASS

List refresh still works: PASS

Result: COMPLETE - 11/11 automated checks passed

admin-web tsc --noEmit: PASS. No linter errors on changed files.

6. Remaining Limitations

Brand field: PENDING - not in catalogue schema; form notes not supported

Image upload: PENDING - no Storage bucket / product_images write API; UI marked pending, read-only

Duplicate Product: PENDING - button disabled with not available yet

Publish remains activate + checklist readiness; it does not upload images or schedule prices.

7. How to Re-verify

- pnpm --filter @groaurum/admin-web exec tsc --noEmit
- node scripts/verify_admin_product_crud.mjs
- UI: Admin Products with VITE_DATA_ADAPTER=supabase - create, edit, archive product; create/edit/archive SKU; confirm list filters and detail tabs.
