

Performance & Authentication Report

Sprint 1.1

Date: 2026-07-19

1. Objective

Improve Admin application startup experience and authentication: stop startup hangs, parallelize dashboard loading, add skeleton UX, and ship a dedicated email/password Login with route protection and logout. Business modules (Orders, Products, Inventory, etc.) were not modified.

2. Root Cause of Slow / Hanging Startup

- Auth gate blanked the entire app while status=loading. Bootstrap ran getSession -> optional signInWithPassword -> profiles load with NO timeout, so a bad/slow Supabase URL left users on Restoring session forever.
- Silent development auto sign-in hid the missing Login page and amplified network hangs when credentials or connectivity failed.
- dashboardSnapshot() was a serial waterfall (~8 awaits), including a duplicate inventory_balances query and select(*) on orders. QueryStateGate kept the page blank until the full chain finished.
- No skeleton loading states and no route code-splitting made waits feel longer.

3. Performance Improvements

Dashboard parallel fan-out: DONE - Promise.all for orders, shops, balances, routes, payments, salesmen

Query efficiency: DONE - removed duplicate inventory query; narrowed order/SKU columns

Route code-splitting: DONE - React.lazy pages + Suspense skeleton in AdminShell

Skeleton loading: DONE - PageSkeleton for session, page chunks, QueryStateGate

React Query defaults: DONE - staleTime 60s, retry 0, no refetchOnWindowFocus

Auth bootstrap timeout: DONE - 12s fail-open to Login instead of infinite hang

4. Authentication Flow Implemented

1) Visit any admin route -> restore persisted Supabase session (or timeout). 2) Unauthenticated / auth error -> redirect to /login. 3) Email + password via Supabase Auth signIn -> dashboard. 4) Refresh keeps session (persistSession + autoRefreshToken). 5) Top-right user menu -> Log out -> /login.

- VITE_AUTH_DEV_EMAIL / PASSWORD now only prefill the Login form; they no longer auto-sign-in.
- Mock provider still auto-signs for offline UI work.
- Clear auth failure messages shown on the Login page.

5. Files Changed

- apps/admin-web/src/pages/LoginPage.tsx (+ CSS) [new]
- apps/admin-web/src/components/ui/PageSkeleton.tsx (+ CSS) [new]
- apps/admin-web/src/auth/guards.tsx
- apps/admin-web/src/auth/createAdminAuthProvider.ts
- apps/admin-web/src/auth/AuthFoundationViews.tsx (+ CSS)
- apps/admin-web/src/App.tsx (login route + lazy pages)
- apps/admin-web/src/layout/TopNav.tsx (+ CSS) - user menu + logout
- apps/admin-web/src/layout/AdminShell.tsx - Suspense skeleton
- apps/admin-web/src/data/live/LiveAdminApi.ts - dashboardSnapshot only
- apps/admin-web/src/data/AdminDataProviders.tsx
- apps/admin-web/src/data/QueryStateGate.tsx
- apps/admin-web/.env.example
- packages/auth/src/providers/supabase-auth-provider.ts - bootstrap timeout
- scripts/generate_sprint1_1_performance_authentication_report_pdf.py [this report]

6. Acceptance Scorecard

Dedicated Login page (email + password): PASS

Protect admin routes / redirect to Login: PASS

Logout in top-right user menu: PASS

Session persists across refresh: PASS

Meaningful loading (skeletons, not blank): PASS

Clear auth error messages: PASS

Dashboard loads in parallel: PASS

Business modules untouched: PASS

Result: COMPLETE - admin-web + auth typecheck PASS

7. How to Verify

- `pnpm --filter @groaurum/admin-web exec tsc --noEmit`
- Open `http://localhost:5173/` -> `/login` (or fast session restore)
- Sign in with `admin@groaurum.local` / `password123`
- Confirm dashboard skeleton then data (not a blank screen)
- Refresh -> still authenticated
- User menu -> Log out -> back to Login
