

# GroAurum

## Sprint 4.0 - Business Scope Migration Report

B2B wholesale grocery + FMCG | Initial area: South Delhi

Generated 2026-08-16 | IMPLEMENTATION COMPLETE

### Verdict

Sprint 4.0 code and seed changes are implemented. Active Gurugram / dry-fruit-only assumptions were removed from development seed, SKU units, customer catalogue, live cart, and admin defaults. Historical documentation and mock admin layout fixtures were left untouched.

Status: BUSINESS SCOPE MIGRATION COMPLETE. Live database reset was not run on the implementation machine because Docker Desktop was not running.

### 1. Scope of this sprint

- New business: GroAurum B2B wholesale grocery + FMCG distribution.
- Initial service area: South Delhi (not Gurugram).
- Initial categories from public.categories: Dry Fruits, Atta / Flour, Rice, Sugar, Spices, FMCG.
- No brand table. No subcategory table. No core table rename.
- Orders, Payments, Delivery, Sales RPCs, RLS, and trusted workflow preserved.
- Prefer seed/data changes. Only one focused RLS policy was added.

### 2. Database / seed changes

Stable seed UUIDs were kept so existing order lines, shops, and auth links remain valid. Geography and catalogue content were updated in place.

#### Territory

| Field            | New development value                                        |
|------------------|--------------------------------------------------------------|
| Service area     | South Delhi                                                  |
| Warehouse        | South Delhi Warehouse 1 / Okhla / New Delhi / Delhi / 110020 |
| Company city     | New Delhi                                                    |
| Serviceable PINs | 110017 Saket, 110019, 110020 Okhla, 110024, 110048, 110062   |

#### Shops (same IDs, new addresses)

| Shop                | Address                           | PIN    | Area        |
|---------------------|-----------------------------------|--------|-------------|
| Sharma Kirana       | Press Enclave Road, Saket         | 110017 | South Delhi |
| Gupta Traders       | Okhla Industrial Area Phase 2     | 110020 | South Delhi |
| Anand General Store | M-Block Market, Greater Kailash I | 110048 | South Delhi |
| City Mart           | Main Market, Malviya Nagar        | 110017 | South Delhi |
| Royal Wholesale     | Krishna Market, Kalkaji           | 110019 | South Delhi |

#### Catalogue (Category -> Product -> SKU -> Price -> Inventory)

| Category     | Sample product                    | SKU unit    | Notes                 |
|--------------|-----------------------------------|-------------|-----------------------|
| Dry Fruits   | California Almonds / W320 Cashews | KG / CARTON | Existing SKU IDs kept |
| Atta / Flour | Chakki Fresh Atta                 | BAG         | New SKU               |
| Rice         | India Gate Basmati Rice           | BAG         | New SKU               |
| Sugar        | Refined Sugar                     | KG          | New SKU               |
| Spices       | Garam Masala                      | PACK        | New SKU               |
| FMCG         | Glucose Biscuits                  | PCS         | New SKU               |

Existing sample order lines still point at almond KG and cashew CARTON. sprint7 / sprint8 inherit shops and were not duplicated.

- Updated: supabase/seed/sprint4\_seed.sql
- Updated: supabase/seed/sprint6\_customer\_seed.sql (PIN rule)
- Updated: supabase/fixtures/phase3\_dev\_fixtures.sql
- New migration: supabase/migrations/20260816120000\_sprint40\_customer\_inventory\_read.sql

The migration only adds a SELECT policy so authenticated CUSTOMER roles can read inventory\_balances. No order, payment, delivery, or sales DDL.

### 3. Selling units

skus.selling\_unit is already text. No extra unit table or enum migration was created. Application locks to CARTON / KG were

removed.

Supported units: KG, GRAM, BAG, PCS, BOX, PACK, TIN, CARTON, LITRE, BOTTLE.

- Zod: packages/validation skuCreateSchema uses SELLING\_UNITS.
- Admin SKU form dropdown lists all units; edit no longer maps non-KG to CARTON.
- Customer quantity step uses each SKU moq/step, not a nut-biased default of 10.
- Packed carton SKUs still require packs\_per\_carton (existing DB check).

## 4. Customer app changes

### Catalogue and UI copy

- Category chips are built from live / mock categories, not hardcoded Dry Fruits / Spices.
- Search placeholder: Search products (not Search dry fruits / almonds, cashews, dates).
- Catalogue subtitle: Search products & wholesale SKUs.
- Search matches product name, unit, grade, specification, description, and category name.
- Mock adapter catalogue expanded to grocery + FMCG with South Delhi hubs.

### Live cart / checkout (highest-risk fix)

When the Customer app is in Supabase adapter mode, cart confirmation no longer uses mock createOrder / validateCartStock.

- Reads real product / SKU rows and effective trade prices.
- Reads real available inventory from inventory\_balances.
- Validates MOQ, quantity step, and stock against live catalogue rows.
- Places the order through place\_customer\_order (trusted RPC).
- Returns the real order ID and shows it in Customer Orders.
- placeCustomerOrder throws if called while mock mode is active.

Mock mode still uses mock services. There is no silent fallback from Supabase mode to mock order creation.

## 5. Admin changes

- CustomersListPage and SalesmenListPage no longer hardcode Gurugram / Haryana / 122001.
- New-customer defaults prefer the first live shop service area, city, and PIN.
- Fallback is central DEFAULT\_SERVICE\_TERRITORY: South Delhi / New Delhi / Delhi / 110017.
- Delivery map empty-address fallback is South Delhi from the same central constant, not Gurugram.

## 6. Tests

| Check                                                | Result                                                    |
|------------------------------------------------------|-----------------------------------------------------------|
| pnpm typecheck                                       | Passed                                                    |
| Lint (shared-types, validation, customer, admin-web) | Passed                                                    |
| shared-types / validation / api-client tests         | Passed (South Delhi PINs; 122001 kept as NOT_SERVICEABLE) |
| pnpm lint (full turbo)                               | Pre-existing api-client notification.ts error             |
| pnpm test (full turbo)                               | Pre-existing @groaurum/data has no test files             |
| pnpm db:reset                                        | Failed - Docker Desktop was not running                   |

Serviceability tests still verify a serviceable PIN, a non-serviceable PIN (122001 / Gurugram against South Delhi rules), and inactive area / inactive rule cases.

## 7. Remaining old-scope references

These were left on purpose. This was not a blind find-and-replace.

- Admin mock layout fixtures (settings, delivery, reports, salesmen) still say Gurugram. Those are mock-mode layout data, not live seed.
- evaluateServiceabilityRules test still uses 122001 as a PIN that must NOT match a South Delhi rule.
- Historical documentation and prior PDFs were not rewritten.

## 8. Remaining mock-data paths

The mock adapter remains for offline / demo development (EXPO\_PUBLIC\_CUSTOMER\_DATA\_ADAPTER=mock).

- Mock catalogue, mock geo, mock createOrder, mock restock history seeding.
- In Supabase mode: catalogue, stock, totals, and checkout do not create mock orders.
- Order detail already branches on adapter mode.

## 9. Files changed (summary)

Shared

- packages/shared-types: SELLING\_UNITS, formatSellingUnitLabel, DEFAULT\_SERVICE\_TERRITORY
- packages/validation: sku sellingUnit enum + BAG/PCS tests
- packages/api-client: delivery map fallback; re-exports territory/units

## Customer

- catalogue-browser.ts, catalogue.tsx, HomeSearchField, CatalogueSearchBar
- customer-catalogue.ts (live stock), cart.tsx, store/cart.ts, store/hooks.ts
- customer-orders.ts, restock.ts, product-b2b.ts, mock/data.ts, location.tsx

## Admin

- ProductSkusTab.tsx, product-types.ts, LiveAdminApi.ts, business-defaults.ts
- CustomersListPage.tsx, SalesmenListPage.tsx

## Tests / DB

- db-tests fixtures + service-area / phase3 / shop-link tests
- sprint4\_seed.sql, sprint6\_customer\_seed.sql, phase3\_dev\_fixtures.sql
- 20260816120000\_sprint40\_customer\_inventory\_read.sql

## 10. Verification still required locally

---

After Docker Desktop is running:

```
pnpm db:reset
pnpm db:seed:sprint4
# then apply sprint6 (and 7/8 if those apps are in use)
```

Then confirm:

- South Delhi serviceability works; Gurugram 122001 is not the active area
- Categories show Dry Fruits, Atta, Rice, Sugar, Spices, FMCG
- Admin can create SKUs with KG, BAG, and PCS
- Customer can browse and search across all categories
- Customer cart reads live Supabase stock and prices
- Checkout creates a real place\_customer\_order result (no mock order)
- The new order appears in Customer Orders and Admin Orders
- Order -> Delivery -> Payment -> Sale workflow still works

## 11. Safety notes

---

- No core tables renamed.
- No Orders / Payments / Delivery / Sales redesign.
- No brand or subcategory tables.
- Categories are data-driven; adding a category does not require app code.
- Blind replace of Gurugram / dry fruit was not used.

## BUSINESS SCOPE MIGRATION COMPLETE
