Phase 5 - Admin Business & Accounting Audit

AUDIT ONLY - No code, schema, or hosted Supabase changes

Generated: October 02, 2026

Scope: apps/admin-web + packages/api* + supabase/migrations

Change confirmation

Code changes: NONE

Database changes: NONE

Migrations applied: NONE

Hosted Supabase changes: NONE

Commit / Push / Deployment: NONE

1. Executive Summary

Admin is a working owner ERP shell with strong order -> payment -> sale -> inventory consume ops, plus cash-oriented accounting (residual AR, Day Book, company expenses, paid payroll, lightweight P&L). It is NOT a general ledger: no journals, chart of accounts, double-entry, supplier/purchasing domain, cost basis, or GST engine.

- Already solid: residual ledger/receivables, payments/COD, company expenses, Day Book, payroll, financial reports, inventory quantity + warehouses, catalogue/pricing, Phase 4A owner money dashboard.
- Largest gaps: purchasing/suppliers, inventory cost/COGS, true profitability, GST compliance, cash/bank opening-closing balances, payment-without-order / advances / credit notes.
- Direction: extend existing cash + residual AR model; do not rebuild a traditional double-entry ERP unless a later phase explicitly requires it.

2. Accounting Audit

Customer ledger is a residual outstanding (AR) model derived from orders joined to payments - NOT a full double-entry accounting ledger. Debit/Credit/Balance columns are presentation only. No journal table, COA, or stored balances.

Customer ledger (residual AR): WORKING - customer-ledger.ts

Receivables / outstanding: WORKING - /receivables + outstanding report

Payments / COD / cash / online: WORKING - payments + COD custody RPCs

Company expenses: WORKING - company_expenses + admin_* RPCs

Day Book: WORKING - client-composed cash events

Paid payroll in Day Book: WORKING - salesman_payroll PAID only

Full refunds: PARTIAL - admin_refund_converted_sale; no partial CN

Formal credit sales: MISSING - zero-credit payment intents

Cash advances / payment w/o order: MISSING

Opening/closing cash-bank balances: MISSING

Journal / double-entry / account heads / CN-DN: MISSING

Outstanding rule: $\text{sum max}(0, \text{order.total} - \text{cash_collected} - \text{online_collected})$ for non-CANCELLED orders; PAID/REFUNDED -> 0.
Day Book entries: sale (PAID), collection (partial), refund, company expense, paid payroll. Salesman expense claims are excluded from Day Book.

3. Purchasing Audit

Purchasing domain (suppliers/PO/GRN/bills): MISSING - no tables/routes

- Closest non-procurement surfaces: company_expense_category.PURCHASE (cash expense only) and inventory movement RECEIPT labeled Supplier Receipt (seed/initial create/fixtures - not PO->GRN).
- salesman_return_requests = customer return claims, not vendor returns; approval does not move stock as a purchase return.

4. Inventory Valuation Audit

Quantity / warehouses / adjust / fulfill: WORKING

Cost basis / COGS / FIFO / batch / transfers: MISSING

Quantity: inventory_balances on_hand/reserved; available = generated GREATEST(on_hand - reserved, 0). Movements append-only (RECEIPT, ORDER_DISPATCH, DAMAGE, RETURN, ADMIN_ADJUSTMENT). Convert consumes reserved stock via _consume_reserved_inventory_for_order. Adjust via admin_adjust_inventory_balance. Stock value UI reads cost_per_unit which is NOT a DB column - live value effectively blank.

5. Profitability Audit

Current P&L is a hybrid operating snapshot, not accounting net profit. From buildProfitLoss in financial-reports.ts:

- Operating Result = converted sales total - company expenses - paid payroll
- Net Cash Movement = Day Book (sale-in + collection-in) - refunds - expenses - paid payroll
- COGS explicitly excluded (disclaimer in code)
- Commission only via paid payroll totals, not a separate P&L line
- Product/salesman reports = sales value / commission earned, not margin

- Convert requires DELIVERED + PAID; sales register is paid conversions. Outstanding comes from order residual (pre-convert / partial).

6. GST / Tax Audit

Company GSTIN/PAN on settings + invoice print: **PARTIAL - display only**

Taxes Settings section: **UI ONLY - live taxes: [] ; fixtures only**

CGST/SGST/IGST, HSN on SKU, line tax, GSTR, e-invoice: **MISSING**

7. Owner Control Audit

Dashboard hierarchy: Money -> Attention -> Operations -> Quick actions -> Recent activity. Money KPIs from ownerFinancialOverview are live. Ops KPIs from dashboardSnapshot / admin_ops_dashboard_kpis. Phase 4A strips duplicate monthly_revenue from ops cards.

- Risk: if Money query fails/loads slowly, dashboard can show no sales revenue because ops already removed monthly_revenue.
- Hard read caps: listSalesRegister limit 500 (owner overview) / 2000 (P&L) can undercount busy periods.
- Cash/bank balances, purchase/GST/profit controls: **MISSING**

8. Database Inventory

Relevant tables include: shops, orders, order_lines, payments, payment_events, sales, sale_items, sales_payments, products, skus, sku_prices, categories, inventory_balances, inventory_movements, stock_reservations, operational_locations, company_expenses, salesman_payroll, salesman_salary_terms, salesman_attendance, sku_commission_terms, salesman_commission_entries, salesman_expenses, salesman_return_requests, delivery/COD tables, settings, reports_snapshot (placeholder).

No tables for: suppliers, purchases, journals, tax lines, cost layers, account heads.

Key migrations: 20260715100600_inventory, 20260715100800_payments, 20260724180000_sales_conversion, 20260820190000_admin_adjust_inventory, 20260827160000_payment_cash_remaining, 20260903120000_fulfill_sale_consume, 20260930120000_company_expenses, 20261001120000_salesman_payroll.

9. API / RPC Inventory

Feature	Admin API	RPC / tables
Receivables/ledger	receivablesSnapshot	Client calc over orders+payments
Day Book	dayBookSnapshot	buildDayBookEntries (derived)
Expenses	companyExpenses* + mutations	admin *_company_expense
Payroll	payrollMonthSnapshot + CRUD	admin *_salesman_payroll
P&L / owner money	profitLossSnapshot ownerFinancialOverview	/ Composes above
Sales / reports	listSalesRegister / productSalesReport	sales / sale_items
Payments / COD	Payments page APIs	mark/settle/verify COD RPCs
Inventory	inventorySnapshot/Detail	balances; adjust via packages/api RPC
Pricing/commission	LiveAdminApi methods	admin_set_sku_price / commission

10. Source-of-Truth Map

Metric	Source	Calc	Mode
Revenue	sales.total (not REFUNDED)	sumSalesTotal	Recalculated
Collections	Day Book sale+collection in	summarizeDayBookByType	Recalculated
Outstanding	order residual vs cash+online	orderOutstandingResidual	Recalculated
Expenses	company_expenses.amount	date filter	Recalculated
Payroll	salesman_payroll PAID total	paid filter	Frozen when PAID
Commission	entries -> payroll total	payroll calc RPC	Accrual + snapshot
Inventory qty	inventory_balances	generated available	Live
Inventory value	None real	UI stub cost_per_unit	N/A
COGS	None	-	N/A
Profit	buildProfitLoss operatingResult	sales - opex - payroll	Recalculated
Refunds	REFUNDED payments/sales	Day Book refund out	Recalculated

11. Existing vs Missing Matrix (summary)

Area	Feature	Status	Location
Accounting	Residual ledger/AR	WORKING	customer-ledger.ts; /receivables
Accounting	Day Book	WORKING	day-book.ts; /day-book
Accounting	Company expenses	WORKING	company_expenses RPCs
Accounting	GL / journals / COA	MISSING	-
Purchasing	Suppliers / PO / GRN	MISSING	-
Inventory	Qty ops	WORKING	balances/movements/RPCs
Inventory	Cost / COGS	MISSING	-
Profit	Operating P&L	WORKING	financial-reports.ts
Profit	Gross / true net	MISSING	-
GST	Company GSTIN print	PARTIAL	settings JSON + invoice
GST	Tax engine / GSTR	MISSING	-
Owner	Money dashboard	WORKING	DashboardPage + overview API
Owner	Taxes settings	UI ONLY	TaxesSection; taxes=[]
AI	LLM / embeddings	MISSING	no deps/keys found

12. Do-Not-Rebuild List

- Residual AR / ledger helpers (customer-ledger.ts) and receivablesSnapshot
- Payment + COD custody RPCs and Payments UI
- Company expense CRUD RPCs + Day Book expense mapping
- Salesman payroll calculate -> approve -> paid + Day Book payroll mapping
- Day Book composition and IST business-dates.ts
- buildProfitLoss / report hub / CSV exporters
- Inventory balances/movements/reservations + adjust + fulfill-on-convert
- Sale conversion core and refund RPC
- Catalogue sku_prices trade pricing + commission accrual
- Phase 1 nav / section hubs (keep secondary modules nested)

13. Missing Features (priority)

Missing feature	Pri	Reuse / note
Supplier master + balances	P0	None domain; expense PURCHASE only
Purchase bill / GRN -> stock with cost	P0	balances + RECEIPT enum patterns
Cost basis / COGS / stock valuation	P0	movements + sale_items qty
Gross/net profit with COGS	P1	Extend buildProfitLoss
Cash/bank closing view	P1	Day Book Cash/Bank/UI methods
GST line tax + HSN	P1	Company GSTIN + invoice print
Supplier dues report	P1	Receivables UX patterns
Payment w/o order / advances	P2	payments today are order-bound
Credit / debit notes	P2	Full refund only today
Real category tax mappings	P2	TaxesSection shell
Admin AI assistant	P3	No AI infra yet

14. Duplicate / Conflict Findings

- Sales revenue vs collections easy to confuse; owner KPI merges Day Book sale-in+collection-in as Collections Today
- Sales totals from sales table vs Day Book money-in from orders/payments (intentional but must stay labeled)
- Outstanding (order residual) vs unpaid sales language on dashboard
- Company expenses vs salesman expense claims (only company in Day Book)
- Payroll vs company expense SALARY category (double-count risk)
- Inventory Supplier Receipt label without purchasing domain
- Settings taxes fixtures vs live empty taxes array
- Stock value reads non-existent cost_per_unit
- COD FIFO settle legacy vs settle-by-order-ids (prefer selected)

15. Data Integrity Risks

- Salary double-count if company_expenses SALARY used alongside paid salesman_payroll
- Operating result != cash profit; COGS absent -> overstated profit appearance
- Inventory value UI misleading without cost column

- PAID Day Book uses order.total as sale-in (assumes paid = full total)
- Refunds full-order only; no partial credit-note path
- PURCHASE expense does not create inventory
- Hard query limits (500/2000) can understate busy periods
- Dashboard revenue can disappear if Money overview fails
- No shop GSTIN; invoice shows seller GSTIN only

16. UX / Navigation Findings

Keep Phase 1 sidebar philosophy (no top-level Pricing/Payments/Warehouses/Commission/Service Areas). Recommended eventual homes (no changes in this audit):

- Purchasing/suppliers -> Business Purchasing hub or Accounting child
- Inventory valuation -> Inventory + Reports
- GST -> Settings (config) + Reports (GSTR) + invoice print
- Profitability -> Reports (extend P&L) + Dashboard money strip
- Supplier dues -> Accounting next to Receivables

17. AI Infrastructure Findings

No OpenAI / Anthropic / Gemini / AI SDK / embeddings / vector DB dependencies or env keys found in app/package/config searches. Future AI would be new infrastructure over existing LiveAdminApi read models - not present today.

18. Recommended Phase 5 Sequence

- 5A Purchasing foundation: supplier master + purchase bill/GRN -> stock with cost
- 5B Inventory valuation + COGS; extend P&L honesty
- 5C Owner money controls: cash/bank views, expense vs payroll guardrails
- 5D GST foundation: HSN/tax on catalogue + invoice lines; GSTR later
- 5E Edge money flows (optional): advances / payment-without-order / credit notes
- 5F AI (optional, last): only after financial sources of truth stabilize

Avoid introducing double-entry unless a later audit proves residual cash accounting is insufficient.

19. Files Inspected (sample)

apps/admin-web/src/data/customer-ledger.ts, day-book.ts, financial-reports.ts, business-dates.ts, company-expenses.ts, salesman-payroll.ts, live/LiveAdminApi.ts, inventory-movement-map.ts; pages/DashboardPage.tsx, App.tsx, nav.ts, section-links.ts, pages/reports/*; components/settings/TaxesSection.tsx, CompanyProfileSection.tsx, OrderInvoicePrint.tsx; packages/validation company-settings; packages/api ops-repositories; packages/api-client database.generated.ts / database.extended.ts.

20. Database Objects Inspected (sample)

Tables/enums/RPCs listed in sections 8-9. Migrations inspected include inventory, payments, sales conversion, adjust inventory, cash remaining, COD custody, fulfill sale consume, company expenses, salesman payroll.

21. Verification

- Tests / typecheck / lint / build: NOT run (audit-only)
- Database inspection: YES - repository migrations + generated types
- Hosted Supabase live query: NO
- Data changed: NO

22. Change Confirmation

- Code changes: NONE
- Database changes: NONE
- Migrations applied: NONE
- Hosted Supabase changes: NONE
