

RichlyBook 2.0 — Core Sales UX Audit

Phase 1: New Sale + Customer + Product
Audit only — no code, schema, or migrations changed
Date: 7 October 2026 · Vyapar used as UX/workflow benchmark only (not a UI copy)

Verdict

RichlyBook is a *wholesale assisted-order ERP* (order → approve/reserve → pack → deliver → full pay → convert), not a Vyapar-style one-screen retail counter sale. Dashboard “New Sale” opens a minimal assisted-order modal. Most backend pieces for catalogue sales, payments, invoices, stock, and books exist — but owner New Sale UX is the wrong product shape for a shop counter.

1. Current Architecture

Layer	Location
Admin app	apps/admin-web
Salesman app	apps/sales-pwa
Delivery app	apps/delivery-pwa
Shared UI / API	packages/ui, packages/api, packages/api-client
Admin data adapter	apps/admin-web/src/data/live/LiveAdminApi.ts
Mutations / hooks	mutations.ts, hooks.ts
Routing / nav	App.tsx, nav.ts (Sales → /orders)
Database / RPCs	supabase/migrations/*

Core sales spine (trusted):

```
Dashboard "New Sale" / Salesmen "Create Order"
→ SalesmanOrderFormModal (1 SKU)
→ place_assisted_order
→ AWAITING_CUSTOMER_CONFIRMATION (no stock yet)
→ Approve → STOCK_RESERVED (_reserve_order_inventory)
→ Process / Pack / Assign / Deliver...
→ admin_mark_payment_received (full PAID; default CASH_ON_DELIVERY)
→ admin_convert_order_to_sale (+ consume reserved stock ORDER_DISPATCH)
→ /sales register + Day Book + admin_sync_accounting_journals
```

2. New Sale — Current State

User flow (Admin)

- 1. Dashboard Quick Action "New Sale" or Salesmen → Create Order
- 2. Modal "Create Assisted Order": salesman + customer shop + **one SKU** + qty
- 3. RPC place_assisted_order → awaiting customer confirmation
- 4. Order detail multi-step workflow → Receive Payment → Convert to Sale
- 5. History: /sales, /sales/:saleId

Orders list has no "+ New Sale" CTA. Modal hint claiming "starts as Stock Reserved" is **stale**.

#	Capability	Status	Notes	Severity
1	Where owner starts	WORKING BUT UX POOR	Dashboard / Salesmen only; not on Orders	HIGH
2	Clear "+ New Sale"	PARTIALLY WORKING	Label says New Sale; modal is assisted order	HIGH
3	Select existing customer	WORKING	Active shops with service area	—
4	Quick-create customer	MISSING	Only on Customers list	HIGH
5	Walk-in Customer	MISSING	No counter / cash party	CRITICAL
6	Search products	WORKING BUT UX POOR	Admin dropdown; Sales PWA has catalogue	HIGH
7	Multiple products	PARTIALLY WORKING	Create = 1 line; edit later; Sales PWA multi-line	CRITICAL
8	Qty change quickly	WORKING BUT UX POOR	After create on Items tab	MEDIUM
9	Units	WORKING	Pack / selling-unit snapshots	—
10	Change selling price	UI ONLY / BROKEN INTENT	Inputs exist; server overwrites with trade price	CRITICAL
11	Discount	PARTIALLY WORKING	SKU pack discounts; no ad-hoc sale discount UI	HIGH
12	GST / tax	PARTIALLY WORKING	SKU HSN/GST fields; invoice has no tax break-up	HIGH
13–14	Custom / non-catalogue item	MISSING	sku_id required	CRITICAL

#	Capability	Status	Notes	Severity
15–18	Cash / UPI / Bank / Credit	PARTIALLY WORKING	Copy mentions methods; UI defaults COD; no picker	HIGH
19	Partial payment	MISSING	Marks full order.total PAID	CRITICAL
20	Totals calc	PARTIALLY WORKING	Subtotal/discount/total/collected/due; no tax; no partial	HIGH
21	Save draft	MISSING	Sales PWA local draft only; Admin posts immediately	HIGH
22	Complete sale	WORKING BUT UX POOR	Many steps; convert needs DELIVERED + PAID	CRITICAL
23–26	Bill print / PDF / download / share	PARTIALLY WORKING	Browser print; no stored PDF; no share	HIGH
27	WhatsApp share	MISSING	—	MEDIUM
28	Stock reduce	WORKING	Reserve on approve; consume on convert	—
29	Customer outstanding	WORKING	Derived orders – payments	—
30	Accounting / day book	WORKING BUT UX POOR	Sync journals; not necessarily same-click as convert	MEDIUM
31–32	Sale history / reopen	WORKING	/sales	—
33	Cancel	WORKING	admin_cancel_order	—
34	Returns	PARTIALLY WORKING	Full-order refund only	HIGH
35–37	Network / RPC errors	WORKING	Surfaced; optimistic pay rollback	LOW

Key paths: SalesmanOrderFormModal.tsx, OrderDetailPage.tsx, OrderItemsTab.tsx, OrderPaymentTab.tsx, sales-pwa CreateOrderPage.tsx

3. Customer — Current State

Capability	Status	Severity	Notes / paths
List / search	WORKING	—	CustomersListPage, customer-list-filters
Filters	WORKING BUT UX POOR	MEDIUM	active/inactive only
Add customer	WORKING BUT UX POOR	HIGH	Wholesale fields (area, salesman, pin, GSTIN)
Edit	WORKING	—	CustomerEditModal
Mobile / address	WORKING / PARTIAL	MEDIUM	Addresses tab mostly read-only
GSTIN	PARTIALLY WORKING	HIGH	Create only; not on detail/edit
Opening balance	MISSING	CRITICAL	No party AR opening

Capability	Status	Severity	Notes / paths
Ledger / outstanding	WORKING	—	CustomerLedgerPanel, receivables
Sales / payments history	WORKING BUT UX POOR	MEDIUM	Limited / read-only tabs
Statement print / CSV	WORKING	—	No PDF/WhatsApp
WhatsApp share	BACKEND ONLY	HIGH	Helpers exist; no customer UI
Bill photo / camera / OCR on customer	MISSING	CRITICAL	Documents tab deferred; OCR = supplier bills only
Quick-create from New Sale	MISSING	HIGH	—
Archive / delete	BACKEND ONLY	HIGH	softDeleteCustomer; no Admin UI

4. Product — Current State

Capability	Status	Severity	Notes
List / search / categories	WORKING	—	No barcode search
Add / edit	WORKING BUT UX POOR	HIGH	Multi-step wizard vs quick add
Name / SKU / image	WORKING	—	—
Barcode	MISSING	HIGH	No schema/UI found
Purchase / selling / MRP	PARTIALLY WORKING	HIGH	Selling works; no MRP
Unit / qty step / MOQ	WORKING	—	Pack model
GST / HSN	PARTIALLY WORKING	HIGH	Packs tab only; not create wizard
Opening / current / min stock	PARTIALLY WORKING	HIGH	Min stock heuristic; reorder level weak
Adjustment / movements	WORKING	—	admin_adjust_inventory_balance
Active / inactive	WORKING	—	—
Archive	PARTIALLY WORKING	CRITICAL	“Archive” = isActive false (draft semantics)
Create during sale / custom item	MISSING	HIGH	—

5. Custom Item — Current State

Mode	Status
A. Permanent catalogue SKU on sale	WORKING (required path)
B. One-time custom item without product	MISSING — CRITICAL

Evidence: assisted lines are { skuId, quantity }; order_lines.sku_id NOT NULL. Example “Special Grocery Item / 2 Kg / ₹180” cannot be sold without creating a product first.

6. Payment & Credit — Current State

Capability	Status	Backend	Severity
Mark full payment received	WORKING	admin_mark_payment_received	—
Cash/UPI/Bank/Credit picker	UI ONLY / PARTIAL	Defaults CASH_ON_DELIVERY	HIGH
Leave unpaid (credit outstanding)	WORKING	Don't mark paid	—
Convert unpaid / credit sale	MISSING	Convert requires PAID	CRITICAL
Partial payment	MISSING	Full order.total only	CRITICAL
Payment history / ledger	WORKING	customer-ledger.ts	—
Full return/refund	PARTIALLY WORKING	admin_refund_converted_sale	HIGH
Day book / journals	WORKING	sync accounting journals	MEDIUM

7. Bill / Invoice — Current State

Capability	Status	Notes	Severity
Invoice numbering	WORKING	admin_create_order_invoice + sale invoice	—
Company / buyer / lines	WORKING	OrderInvoicePrint	—
GST break-up (CGST/SGST/HSN)	MISSING	Seller GSTIN only	HIGH
Print / Save as PDF	WORKING	Browser print; no stored file	—
Download / share / WhatsApp	MISSING	—	HIGH
Suitable for Indian GST retail	PARTIALLY	Wholesale skeleton only	HIGH

8. Inventory & Accounting Flow

```
place_assisted_order → orders + order_lines (no reserve)
  → approve → STOCK_RESERVED (_reserve_order_inventory)
  → ... pack / deliver ...
  → admin_mark_payment_received → payments (full amount)
  → admin_convert_order_to_sale → sales + sale_items
    + _consume_reserved_inventory_for_order (ORDER_DISPATCH)
  → admin_sync_accounting_journals
    sale: Dr AR(1100) / Cr Sales(4000) + optional COGS
    collection: Dr Cash/Bank / Cr AR
  → day book / reports
```

Concern	Finding	Severity
Price authority	Server ignores client unitPrice / agreedUnitPrice	CRITICAL

Concern	Finding	Severity
Partial outstanding	Not supported on mark-paid	CRITICAL
Accounting lag	Journals via date-range sync, not auto on convert click	HIGH
Duplicate create UX	Admin 1-line vs Sales PWA cart vs replace-lines	HIGH
Convert idempotency	Good if sale_id already set	—

9. UX Problems

1. “New Sale” ≠ sale — opens assisted wholesale order.
2. Orders page has no primary create CTA.
3. Too many steps to finish money.
4. Admin create is one SKU; salesman app is better.
5. Price fields look editable but do not stick.
6. Payment method not choosable despite copy.
7. Terminology (Assisted Order, Stock Reserved, Convert) is ops-console language.
8. Customer/product create forms are heavy for counter use.
9. Overall feel is internal admin dashboard, not Indian shop accounting software.

10. Vyapar-Style Gaps

Characteristic	RichlyBook today	Gap
Quick New Sale (1 screen)	Multi-step wholesale order	CRITICAL
Walk-in	Missing	CRITICAL
Custom item	Missing	CRITICAL
Editable price / discount / tax	Partial / overwritten	CRITICAL
Cash/UPI/Credit + partial	Full-pay only; method weak	CRITICAL
Invoice print/share	Print only	HIGH
Customer ledger	Strong — reuse	—
Purchase / stock	Strong separately — keep	—

11. Missing Features

- Walk-in customer; custom free-text sale lines
- True one-screen owner New Sale
- Partial payment + payment method selection

- Credit convert without full PAID (if desired)
- GST tax lines on invoice + sale posting
- Customer opening balance; customer document photo attach
- WhatsApp share bill/statement; stored PDF
- Barcode / MRP; quick-create customer/product from sale
- Partial returns; Admin draft cart

12. Broken / Misleading Features

Item	Classification	Why
Dashboard "New Sale"	WORKING BUT UX POOR / misleading	Assisted order, not counter sale
Modal "Stock Reserved" hint	STALE / WRONG	Starts awaiting confirmation; reserve on approve
Unit price edit on order lines	UI ONLY / broken intent	RPC overwrites with trade price
Receive Payment Cash/UPI/Bank/Credit copy	UI ONLY mislead	No picker; defaults COD
Customer Documents tab	UI ONLY / deferred	Always empty in live
Product "Archive"	PARTIALLY WORKING / misleading	Sets draft/inactive, not true archive
Salesman detail Create Order	BROKEN CTA	Only switches tab; does not open modal

13. Duplicate / Conflicting Implementations

1. **Create order:** Admin 1-line modal vs Sales PWA cart vs post-create replace-lines.
2. **Invoice:** Pre-sale admin_create_order_invoice vs sale invoice on convert.
3. **Payment:** Order mark-paid vs payment proof scan vs delivery COD collect.
4. **Bill photo OCR:** Supplier purchases only — not customers.
5. **Labels:** Nav "Sales" → Orders; Quick action "New Sale" → Assisted Order.

14. Recommended Reuse

Do **not** rebuild or fork:

- place_assisted_order / preview_assisted_order_lines / replace-lines RPCs
- admin_mark_payment_received, admin_convert_order_to_sale, cancel/refund
- OrderInvoicePrint + company settings
- Inventory reserve/consume + movements
- admin_sync_accounting_journals + day book
- Customer ledger / receivables / dues

- Product / SKU / pricing / inventory stack
- Sales PWA cart patterns as UX reference for Admin New Sale

15. Recommended Changes (design only)

1. Owner New Sale screen that completes money in one flow (reuse RPCs or thin wrappers).
2. Walk-in + quick customer create.
3. Multi-line cart + custom items (schema/RPC decision required).
4. If price override is a product need, change server contract — UI alone is insufficient.
5. Payment: method + amount paid + due (extend mark-paid).
6. Immediate bill print/share after complete; GST on bill when rates present.
7. Keep wholesale long lifecycle for B2B; layer counter-sale path; do not delete.

16. Priority Order

- 1. CRITICAL — Real New Sale UX on existing spine (multi-line, totals, complete)**
- 2. CRITICAL — Custom item + walk-in**
- 3. CRITICAL — Partial payment + method; decide price-override server policy**
- 4. HIGH — Invoice GST + share/print polish**
- 5. HIGH — Quick customer/product from sale**
- 6. HIGH — Books sync honesty right after sale**
- 7. MEDIUM — Customer document photos (reuse purchase scan later)**
- 8. LOW — Barcode / MRP if retail target**

Recommended First Implementation

1. Owner New Sale shell (Admin) — multi-line cart using preview/place + Sales PWA patterns; primary CTA on Sales/Orders.
2. Customer select + quick-create + Walk-in (minimal fields).
3. Catalogue lines + Custom item (backend must allow non-SKU or ephemeral SKU — decide before UI).
4. Payment panel — Cash/UPI/Bank/Credit + amount paid / due.
5. Complete → invoice print (shorten counter path; keep wholesale lifecycle).
6. Confirm stock + outstanding + journal sync still fire from existing RPCs.
